Thematic Area Guide for:

Guidelines for Integrating Gender-Based Violence Interventions in Humanitarian Action

Reducing risk, promoting resilience and aiding recovery

Livelihoods

<www.gbvguidelines.org>
Acknowledgements

This Thematic Area Guide (TAG) is excerpted from the comprehensive Inter-Agency Standing Committee Guidelines for Integrating Gender-Based Violence Interventions in Humanitarian Action: Reducing risk, promoting resilience and aiding recovery (IASC, 2015), available at <www.gbvguidelines.org>. The lead authors were Jeanne Ward and Julie Lafrenière, with support from Sarah Coughtry, Samira Sami and Janey Lawry-White.

The comprehensive Guidelines were revised from the original 2005 IASC Guidelines for Gender-Based Violence Interventions in Humanitarian Settings. The revision process was overseen by an Operations Team led by UNICEF. Operations team members were: Mendy Marsh and Erin Patrick (UNICEF), Erin Kenny (UNFPA), Joan Timoney (Women’s Refugee Commission) and Beth Vann (independent consultant), in addition to the authors. The process was further guided by an inter-agency advisory board (‘Task Team’) of 16 organizations including representatives of the global GBV Area of Responsibility (GBV AoR) co-lead agencies—UNICEF and UNFPA—as well as UNHCR, UN Women, the World Food Programme, expert NGOs (the American Refugee Committee, Care International, Catholic Relief Services, ChildFund International, InterAction, International Medical Corps, International Rescue Committee, Oxfam International, Plan International, Refugees International, Save the Children and Women’s Refugee Commission), the U.S. Centers for Disease Control and Prevention and independent consultants with expertise in the field. The considerable dedication and contributions of all these partners has been critical throughout the entire revision process.

The content and design of the revised Guidelines was informed by a highly consultative process that involved the global distribution of multi-lingual surveys in advance of the revision process to help define the focus and identify specific needs and challenges in the field. In addition, detailed inputs and feedback were received from over 200 national and international actors both at headquarters and in-country, representing most regions of the world, over the course of two years and four global reviews. Draft content of the Guidelines was also reviewed and tested at the field level, involving an estimated additional 1,000 individuals across United Nations, INGO and government agencies in nine locations in eight countries.

The Operations and Task Teams would like to extend a sincere thank you to all those individuals and groups who contributed to the Guidelines revision process from all over the world, particularly the Cluster Lead Agencies and cluster coordinators at global and field levels. We thank you for your input as well as for your ongoing efforts to address GBV in humanitarian settings.

We would like to thank the United States Government for its generous financial support for the revision process.

A Global Reference Group has been established to help promote the Guidelines and monitor their use. The Reference Group is led by UNICEF and UNFPA and includes as its members: American Refugee Committee, Care International, the U.S. Centers for Disease Control and Prevention, ChildFund International, International Medical Corps, International Organization for Migration, International Rescue Committee, Norwegian Refugee Council, Oxfam, Refugees International, Save the Children, UNHCR and Women’s Refugee Commission.

For more information about the implementation of the revised Guidelines, please visit the GBV Guidelines website <www.gbvguidelines.org>. This website hosts a knowledge repository and provides easy access to the comprehensive Guidelines, the TAGs and related tools, collated case studies and monitoring and evaluation results. Arabic, French and Spanish versions of the Guidelines and associated training and rollout materials are available on this website as well.

The designations employed and the presentation of the material in this publication do not imply the expression of any opinion whatsoever on the part of the United Nations or partners concerning the legal status of any country, territory, city or area or its authorities, or concerning the delimitation of its frontiers or boundaries.

Foreword

All national and international actors responding to a humanitarian emergency have a duty to protect people affected by crisis, including from gender-based violence (GBV). Because no single organization, agency or entity working in an emergency can prevent GBV alone, collective effort is paramount. All humanitarian actors must be aware of the risks of GBV and coordinate their actions to ensure a comprehensive response while working to prevent and mitigate GBV acts as quickly as possible.

The severe economic hardship resulting from humanitarian emergencies places affected populations – especially women and girls – at an increased risk of sexual exploitation, dependence on abusive relationships, forced and/or coerced prostitution, and other forms of GBV. If not done well, some livelihoods activities can result in sexual assault, harassment and abuse by customers or suppliers. Livelihoods programmes that target women and adolescent girls without attention to the risks associated with shifting gender roles may increase their exposure to violence by intimate partners and/or males in the community.

Livelihoods programmes can play a critical role in enhancing the safety and well-being of affected populations and at the same time support early recovery efforts. For example, humanitarian and early recovery programmes that include built-in protective mechanisms to monitor and address the risks of GBV can help to reduce participants’ exposure to violence and exploitation, while building resilience and empowering them with skills training and social and financial capitals.

This Thematic Area Guide (TAG) on livelihoods and GBV is part of the larger comprehensive Guidelines for Integrating Gender-Based Violence Interventions in Humanitarian Action: Reducing risk, promoting resilience and aiding recovery (IASC, 2015, available at <www.gbvguidelines.org>). It is a portable tool. The guide provides practical guidance that will assist livelihoods actors and affected communities in coordinating, planning, implementing, monitoring and evaluating essential actions for the prevention and mitigation of GBV. Extensively reviewed and field tested, the guidance reflects the combined wisdom and experience of colleagues from the livelihoods sector, as well as from the wider humanitarian community. It is meant to be used from the preparedness stage of emergency response through to the recovery phase.

Promoting and protecting the rights of affected populations – including the right to be safe from GBV – is central to all humanitarian action, including livelihoods programmes. By implementing this guidance, we can achieve groundbreaking improvements in humanitarian response and recovery. Most important, we will enhance the safety and dignity of those we serve, now and into the future. We owe that to them.

1. About This Thematic Area Guide

Purpose of This Guide

This Thematic Area Guide (TAG) is excerpted from the comprehensive Inter-Agency Standing Committee Guidelines for Integrating Gender-Based Violence Interventions in Humanitarian Action: Reducing risk, promoting resilience and aiding recovery (IASC, 2015). The purpose of this TAG is to assist livelihoods actors and communities affected by armed conflict, natural disasters and other humanitarian emergencies to coordinate, plan, implement, monitor and evaluate essential actions for the prevention and mitigation of gender-based violence (GBV) across the livelihoods sector.

As detailed below, GBV is a widespread international public health and human rights issue. During a humanitarian crisis, many factors can exacerbate GBV-related risks. These include—but are not limited to—increased militarization, lack of community and State protections, displacement, scarcity of essential resources, disruption of community services, changing cultural and gender norms, disrupted relationships and weakened infrastructure.

All national and international actors responding to an emergency have a duty to protect those affected by the crisis; this includes protecting them from GBV. In order to save lives and maximize protection, essential actions must be undertaken in a coordinated manner from the earliest stages of emergency preparedness. These actions, described in Part Three: Livelihoods Guidance, are necessary in every humanitarian crisis and are focused on three overarching and interlinked goals:

1. To reduce risk of GBV by implementing GBV prevention and mitigation strategies within the livelihoods sector from pre-emergency through to recovery stages;
2. To promote resilience by strengthening national and community-based systems that prevent and mitigate GBV, and by enabling survivors and those at risk of GBV to access care and support; and
3. To aid recovery of communities and societies by supporting local and national capacity to create lasting solutions to the problem of GBV.

---

1 The comprehensive Guidelines include guidance for thirteen areas of humanitarian operations, including camp coordination and camp management (CCCM); child protection; education; food security and agriculture (FSA); health; housing, land and property (HLP); humanitarian mine action (HMA); livelihoods; nutrition; protection; shelter, settlement and reconstruction (SS&R); water, sanitation and hygiene (WASH); and humanitarian operations support sectors (e.g. logistics and telecommunications). Unlike this TAG, the comprehensive Guidelines also include annexes with supplemental resources related to GBV prevention, mitigation and response. The annexes are also available as stand-alone documents. The comprehensive Guidelines and stand-alone TAGs and annexes are available at <www.gbvguidelines.org>.

2 The different areas of humanitarian operation addressed in the comprehensive Guidelines and the stand-alone TAGs have been identified based on the global cluster system. However, both this TAG and the comprehensive Guidelines generally use the word ‘sector’ rather than ‘cluster’ in an effort to be relevant to both cluster and non-cluster contexts. Where specific reference is made to work conducted only in clusterized settings, the word ‘cluster’ is used. For more information about the cluster system, see <http://www.humanitarianresponse.info/clusters/space/page/what-cluster-approach>.

3 A survivor is a person who has experienced gender-based violence. The terms ‘victim’ and ‘survivor’ can be used interchangeably. ‘Victim’ is a term often used in the legal and medical sectors, while the term ‘survivor’ is generally preferred in the psychological and social support sectors because it implies resiliency. This TAG employs the term ‘survivor’ in order to reinforce the concept of resiliency.
How This Thematic Area Guide is Organized

**Part One** introduces this TAG, presents an overview of GBV and provides an explanation for why GBV is a protection concern for all livelihoods actors.

**Part Two** provides a background to and summarizes the structure of the livelihoods guidance in **Part Three**. It also introduces the guiding principles and approaches that are the foundation for all planning and implementation of GBV-related programming.

**Part Three** provides specific guidance for the livelihoods sector to implement programming that addresses the risk of GBV.

Although this TAG is specifically tailored to the livelihoods sector, all humanitarian actors must avoid ‘siloe’d interventions. Livelihoods actors should strive to work with other sectors to ensure coordinated response, and recommendations for coordination are outlined in **Part Three**. It is also recommended that livelihoods actors review the content of the comprehensive Guidelines—not just their TAG—in order to familiarize themselves with key GBV prevention, mitigation and response activities of other sectors.

This TAG draws from many tools, standards, background materials and other resources developed by UN, I/NGO and academic sources. At the end of **Part Three** there is a list of resources specific to livelihoods; additional GBV-related resources are provided in **Annex 1** of the comprehensive Guidelines, available at <www.gbvguidelines.org>.

---

**ESSENTIAL TO KNOW**

**‘Prevention’ and ‘Mitigation’ of GBV**

Throughout this TAG, there is a distinction made between ‘prevention’ and ‘mitigation’ of GBV. While there will inevitably be overlap between these two areas, **prevention** generally refers to taking action to stop GBV from first occurring (e.g. scaling up activities that promote gender equality; working with communities, particularly men and boys, to address practices that contribute to GBV; etc.). **Mitigation** refers to reducing the risk of exposure to GBV (e.g. ensuring that reports of ‘hot spots’ are immediately addressed through risk-reduction strategies; ensuring sufficient lighting and security patrols are in place from the onset of establishing displacement camps; etc.). While some humanitarian sectors (such as health) may undertake response activities related to survivor care and assistance, the overarching focus of this TAG is on essential prevention and mitigation activities that should be undertaken within and across the livelihoods sector.

---

**ESSENTIAL TO KNOW**

**Assume GBV Is Taking Place**

The actions outlined in this TAG are relevant from the earliest stages of humanitarian intervention and in any emergency setting, regardless of whether the prevalence or incidence of various forms of GBV is ‘known’ and verified. It is important to remember that GBV is happening everywhere. It is under-reported worldwide, due to fears of stigma or retaliation, limited availability or accessibility of trusted service providers, impunity for perpetrators, and lack of awareness of the benefits of seeking care. Waiting for or seeking population-based data on the true magnitude of GBV should not be a priority in an emergency due to safety and ethical challenges in collecting such data. With this in mind, all humanitarian personnel ought to assume GBV is occurring and threatening affected populations; treat it as a serious and life-threatening problem; and take actions based on recommendations in this TAG, regardless of the presence or absence of concrete ‘evidence’.
Target Audience

This TAG is designed for national and international livelihoods actors operating in settings affected by armed conflict, natural disasters and other humanitarian emergencies, as well as in host countries and/or communities that receive people displaced by emergencies. The principal audience is livelihoods programmers—agencies and individuals who can use the information to incorporate GBV prevention and mitigation strategies into the design, implementation, monitoring and evaluation of livelihoods interventions. However, it is critical that humanitarian leadership—including governments, humanitarian coordinators, livelihoods coordinators and donors—also use this TAG as a reference and advocacy tool to improve the capacity of the livelihoods sector to prevent and mitigate GBV. This TAG can further serve those working in development contexts—particularly contexts affected by cyclical disasters—in planning and preparing for humanitarian action that includes efforts to prevent and mitigate GBV.

This TAG is primarily targeted to non-GBV specialists—that is, agencies and individuals who work in humanitarian response sectors other than GBV and do not have specific expertise in GBV prevention and response programming, but can nevertheless undertake activities that significantly reduce the risk of GBV for affected populations.4

The guidance emphasizes the importance of active involvement of all members of affected communities; this includes the leadership and meaningful participation of women and girls—alongside men and boys—in all preparedness, design, implementation, and monitoring and evaluation activities.

4 Government, humanitarian coordinators, humanitarian country teams/inter-cluster working groups, cluster/sector lead agencies, cluster/sector coordinators and GBV coordination mechanisms can play an especially critical role in supporting the uptake of this TAG as well as the comprehensive Guidelines. For more information about actions to be undertaken by these actors to facilitate implementation of the Guidelines, see ‘Ensuring Implementation of the GBV Guidelines: Responsibilities of key actors’ (available at <www.gbvguidelines.org> as both a stand-alone document and as part of ‘Part One: Introduction’ of the comprehensive Guidelines).

5 Affected populations include all those who are adversely affected by an armed conflict, natural disaster or other humanitarian emergency, including those displaced (both internally and across borders) who may still be on the move or have settled into camps, urban areas or rural areas.
2. Overview of Gender-Based Violence

Defining GBV

Gender-based violence (GBV) is an umbrella term for any harmful act that is perpetrated against a person’s will and that is based on socially ascribed (i.e. gender) differences between males and females. It includes acts that inflict physical, sexual or mental harm or suffering, threats of such acts, coercion, and other deprivations of liberty. These acts can occur in public or in private.

Acts of GBV violate a number of universal human rights protected by international instruments and conventions (see ‘The Obligation to Address Gender-Based Violence in Humanitarian Work’, below). Many—but not all—forms of GBV are criminal acts in national laws and policies; this differs from country to country, and the practical implementation of laws and policies can vary widely.

The term ‘GBV’ is most commonly used to underscore how systemic inequality between males and females—which exists in every society in the world—acts as a unifying and foundational characteristic of most forms of violence perpetrated against women and girls. The United Nations Declaration on the Elimination of Violence against Women (DEVAW, 1993) defines violence against women as “any act of gender-based violence that results in, or is likely to result in, physical, sexual or psychological harm or suffering to women.” DEVAW emphasizes that the violence is “a manifestation of historically unequal power relations between men and women, which have led to the domination over and discrimination against women by men and to the prevention of the full advancement of women.” Gender discrimination is not only a cause of many forms of violence against women and girls but also contributes to the widespread acceptance and invisibility of such violence—so that perpetrators are not held accountable and survivors are discouraged from speaking out and accessing support.

The term ‘gender-based violence’ is also increasingly used by some actors to highlight the gendered dimensions of certain forms of violence against men and boys—particularly some forms of sexual violence committed with the explicit purpose of reinforcing gender inequitable norms of masculinity and femininity (e.g. sexual violence committed in armed conflict aimed at emasculating or feminizing the enemy). This violence against males is based on socially constructed ideas of what it means to be a man and exercise male power. It is used by men (and in rare cases by women) to cause harm to other males. As with violence against women and girls, this violence is often under-reported due to issues of stigma for the survivor—in this case associated with norms of masculinity (e.g. norms that discourage male survivors from acknowledging vulnerability, or suggest that a male survivor is somehow weak for having been assaulted). Sexual assault against males may also go unreported in situations where such reporting could result in life-threatening repercussions against the
survivor and/or his family members. Many countries do not explicitly recognize sexual violence against men in their laws and/or have laws which criminalize survivors of such violence.

The term ‘gender-based violence’ is also used by some actors to describe violence perpetrated against lesbian, gay, bisexual, transgender and intersex (LGBTI) persons that is, according to OHCHR, “driven by a desire to punish those seen as defying gender norms” (OHCHR, 2011). The acronym ‘LGBTI’ encompasses a wide range of identities that share an experience of falling outside societal norms due to their sexual orientation and/or gender identity. (For a review of terms, see Annex 2 of the comprehensive Guidelines, available at <www.gbvguidelines.org>.) OHCHR further recognizes that “lesbians and transgender women are at particular risk because of gender inequality and power relations within families and wider society.” Homophobia and transphobia not only contribute to this violence but also significantly undermine LGBTI survivors’ ability to access support (most acutely in settings where sexual orientation and gender identity are policed by the State).

**ESSENTIAL TO KNOW**

**Women, Girls and GBV**

Women and girls everywhere are disadvantaged in terms of social power and influence, control of resources, control of their bodies and participation in public life—all as a result of socially determined gender roles and relations. Gender-based violence against women and girls occurs in the context of this imbalance. While livelihoods actors must analyse different gendered vulnerabilities that may put men, women, boys and girls at heightened risk of violence and ensure care and support for all survivors, special attention should be given to females due to their documented greater vulnerabilities to GBV, the overarching discrimination they experience, and their lack of safe and equitable access to humanitarian assistance. Livelihoods actors have an obligation to promote gender equality through humanitarian action in line with the IASC ‘Gender Equality Policy Statement’ (2008). They also have an obligation to support, through targeted action, women’s and girls’ protection, participation and empowerment as articulated in the Women, Peace and Security thematic agenda outlined in United Nations Security Council Resolutions (see Annex 6 of the comprehensive Guidelines, available at <www.gbvguidelines.org>). While supporting the need for protection of all populations affected by humanitarian crises, this TAG recognizes the heightened vulnerability of women and girls to GBV and provides targeted guidance to address these vulnerabilities—including through strategies that promote gender equality.

**Nature and Scope of GBV in Humanitarian Settings**

A great deal of attention has centred on monitoring, documenting and addressing sexual violence in conflict—for instance the use of rape or other forms of sexual violence as a weapon of war. Because of its immediate and potentially life-threatening health consequences, coupled with the feasibility of preventing these consequences through medical care, addressing sexual violence is a priority in humanitarian settings. At the same time, there is a growing recognition that affected populations can experience various forms of GBV during conflict and natural disasters, during displacement, and during and following return. In particular, intimate partner violence is increasingly recognized as a critical GBV concern in humanitarian settings.

These additional forms of violence—including intimate partner violence and other forms of domestic violence, forced and/or coerced prostitution, child and/or forced marriage, female genital mutilation/cutting, female infanticide, and trafficking for sexual exploitation and/or forced/domestic labour—must be considered in GBV prevention and mitigation efforts according to the trends in violence and the needs identified in a given setting. (For a list of types of GBV and associated definitions, see Annex 3 of the comprehensive Guidelines, available at <www.gbvguidelines.org>.)
In all types of GBV, violence is used primarily by males against females to subordinate, disempower, punish or control. The gender of the perpetrator and the victim are central not only to the motivation for the violence, but also to the ways in which society condones or responds to the violence. Whereas violence against men is more likely to be committed by an acquaintance or stranger, women more often experience violence at the hands of those who are well known to them: intimate partners, family members, etc. In addition, widespread gender discrimination and gender inequality often result in women and girls being exposed to multiple forms of GBV throughout their lives, including ‘secondary’ GBV as a result of a primary incident (e.g. abuse by those they report to, honor killings following sexual assault, forced marriage to a perpetrator, etc.).

Obtaining prevalence and/or incidence data on GBV in emergencies is not advisable due to the methodological and contextual challenges related to undertaking population-based research on GBV in emergency settings (e.g. security concerns for survivors and researchers, lack of available or accessible response services, etc.). The majority of information about the nature and scope of GBV in humanitarian contexts is derived from qualitative research, anecdotal reports, humanitarian monitoring tools and service delivery statistics. These data suggest that many forms of GBV are significantly aggravated during humanitarian emergencies, as illustrated in the statistics provided below. (See Annex 5 of the comprehensive Guidelines, available at <www.gbvguidelines.org>, for additional statistics as well as for citations for the data presented below.)

- In the Democratic Republic of the Congo during 2013, UNICEF coordinated with partners to provide services to 12,247 GBV survivors; 3,827—or approximately 30 per cent—were children, of whom 3,748 were girls and 79 were boys (UNICEF DRC, 2013).

- In Pakistan following the 2011 floods, 52 per cent of surveyed communities reported that privacy and safety of women and girls was a key concern. In a 2012 Protection Rapid Assessment with conflict-affected IDPs, interviewed communities reported that a number of women and girls were facing aggravated domestic violence, forced marriage, early marriages and exchange marriages, in addition to other cases of gender-based violence (de la Puente, 2014).

- In Afghanistan, a household survey (2008) showed 87.2 per cent of women reported one form of violence in their lifetime and 62 per cent had experienced multiple forms of violence (de la Puente, 2014).

6 In 2013 the World Health Organization and others estimated that as many as 38 per cent of female homicides globally were committed by male partners while the corresponding figure for men was 6 per cent. They also found that whereas males are disproportionately represented among victims of violent death and physical injuries treated in emergency departments, women and girls, children and elderly people disproportionately bear the burden of the nonfatal consequences of physical, sexual and psychological abuse, and neglect, worldwide. (World Health Organization. 2014. Global Status Report on Violence Prevention 2014, <www.who.int/violence_injury_prevention/violence/status_report/2014/en/>. Also see World Health Organization. 2002. World Report on Violence and Health, <http://whqlibdoc.who.int/hq/2002/9241545615.pdf>.)
• In Liberia, a survey of 1,666 adults found that 32.6 per cent of male combatants experienced sexual violence while 16.5 per cent were forced to be sexual servants (Johnson et al, 2008). Seventy-four per cent of a sample of 388 Liberian refugee women living in camps in Sierra Leone reported being sexually abused prior to being displaced. Fifty-five per cent experienced sexual violence during displacement (IRIN, 2006; IRIN, 2008).

• Of 64 women with disabilities interviewed in post-conflict Northern Uganda, one third reported experiencing some form of GBV and several had children as a result of rape (HRW, 2010).

• In a 2011 assessment, Somali adolescent girls in the Dadaab refugee complex in Kenya explained that they are in many ways ‘under attack’ from violence that includes verbal and physical harassment; sexual exploitation and abuse in relation to meeting their basic needs; and rape, including in public and by multiple perpetrators. Girls reported feeling particularly vulnerable to violence while accessing scarce services and resources, such as at water points or while collecting firewood outside the camps (UNHCR, 2011).

• In Mali, daughters of displaced families from the North (where female genital mutilation/cutting (FGM/C) is not traditionally practised) were living among host communities in the South (where FGM/C is common). Many of these girls were ostracized for not having undergone FGM/C; this led families from the North to feel pressured to perform FGM/C on their daughters (Plan Mali, April 2013).

• Domestic violence was widely reported to have increased in the aftermath of the 2004 Indian Ocean tsunami. One NGO reported a three-fold increase in cases brought to them (UNFPA, 2011). Studies from the United States, Canada, New Zealand and Australia also suggest a significant increase in intimate partner violence related to natural disasters (Sety, 2012).

• Research undertaken by the Human Rights Documentation Unit and the Burmese Women’s Union in 2000 concluded that an estimated 40,000 Burmese women are trafficked each year into Thailand’s factories and brothels and as domestic workers (IRIN, 2006).

• The GBV Information Management System (IMS), initiated in Colombia in 2011 to improve survivor access to care, has collected GBV incident data from 7 municipalities. As of mid-2014, 3,499 females (92.6 per cent of whom were 18 years or older) and 437 males (91.8 per cent of whom were 18 years or older) were recorded in the GBVIMS, of whom over 3,000 received assistance (GBVIMS Colombia, 2014).

**OVERVIEW OF GBV**

**ESSENTIAL TO KNOW**

**Protection from Sexual Exploitation and Abuse (PSEA)**

As highlighted in the Secretary-General’s Bulletin on ‘Special Measures for Protection from Sexual Exploitation and Sexual Abuse’ (ST/SGB/2003/13, <www.refworld.org/docid/451bb6764.htm>). PSEA relates to certain responsibilities of international humanitarian, development and peacekeeping actors. These responsibilities include preventing incidents of sexual exploitation and abuse committed by United Nations, NGO, and inter-governmental organization (IGO) personnel against the affected population; setting up confidential reporting mechanisms; and taking safe and ethical action as quickly as possible when incidents do occur. PSEA is an important aspect of preventing GBV and PSEA efforts should therefore link to GBV expertise and programming—especially to ensure survivors’ rights and other guiding principles are respected.

These responsibilities are at the determination of the Humanitarian Coordinator/Resident Coordinator and individual agencies. As such, detailed guidance on PSEA is outside the authority of this TAG. This TAG nevertheless wholly supports the mandate of the Secretary-General’s Bulletin and provides several recommendations on incorporating PSEA strategies into agency policies and community outreach. Detailed guidance is available on the IASC AAP/PSEA Task Force website: <www.pseataskforce.org>. 
Impact of GBV on Individuals and Communities

GBV seriously impacts survivors’ immediate sexual, physical and psychological health, and contributes to greater risk of future health problems. Possible sexual health effects include unwanted pregnancies, complications from unsafe abortions, female sexual arousal disorder or male impotence, and sexually transmitted infections, including HIV. Possible physical health effects of GBV include injuries that can cause both acute and chronic illness, impacting neurological, gastrointestinal, muscular, urinary, and reproductive systems. These effects can render the survivor unable to complete otherwise manageable physical and mental labour. Possible mental health problems include depression, anxiety, harmful alcohol and drug use, post-traumatic stress disorder and suicidality.\(^7\)

Survivors of GBV may suffer further because of the stigma associated with GBV. Community and family ostracism may place them at greater social and economic disadvantage. The physical and psychological consequences of GBV can inhibit a survivor’s functioning and well-being—not only personally but in relationships with family members. The impact of GBV can further extend to relationships in the community, such as the relationship between the survivor’s family and the community, or the community’s attitudes towards children born as a result of rape. LGBTI persons can face problems in convincing security forces that sexual violence against them was non-consensual; in addition, some male victims may face the risk of being counter-prosecuted under sodomy laws if they report sexual violence perpetrated against them by a man.

GBV can affect child survival and development by raising infant mortality rates, lowering birth weights, contributing to malnutrition and affecting school participation. It can further result in specific disabilities for children: injuries can cause physical impairments; deprivation of proper nutrition or stimulus can cause developmental delay; and consequences of abuse can lead to long-term mental health problems.

Many of these effects are hard to link directly to GBV because they are not always easily recognizable by health and other providers as evidence of GBV. This can contribute to mistaken assumptions that GBV is not a problem. However, failure to appreciate the full extent and hidden nature of GBV—as well as failure to address its impact on individuals, families and communities—can limit societies’ ability to heal from humanitarian emergencies.

Contributing Factors to and Causes of GBV

Integrating GBV prevention and mitigation into humanitarian interventions requires anticipating, contextualizing and addressing factors that may contribute to GBV. Examples of these factors at the societal, community and individual/family levels are provided below. These levels are loosely based on the ecological model developed by Heise (1998). The examples are illustrative; actual risk factors will vary according to the setting, population and type of GBV. Even so, these examples underscore the importance of addressing GBV through broad-based interventions that target a variety of different risks.

Conditions related to humanitarian emergencies may exacerbate the risk of many forms of GBV. However, the underlying causes of violence are associated with attitudes, beliefs, norms and structures that promote and/or condone gender-based discrimination and unequal

---

power, whether during emergencies or during times of stability. Linking GBV to its roots in gender discrimination and gender inequality necessitates not only working to meet the immediate needs of the affected populations, but also implementing strategies—as early as possible in any humanitarian action—that promote long-term social and cultural change towards gender equality. Such strategies include ensuring leadership and active engagement of women and girls, along with men and boys, in the livelihoods sector; conducting advocacy to promote the rights of all affected populations; and enlisting females as livelihoods programme staff, including in positions of leadership.

### Overview of GBV

#### Society-Level Contributing Factors
- Porous/unmonitored borders; lack of awareness of risks of being trafficked
- Lack of adherence to rules of combat and International Humanitarian Law
- Hyper-masculinity; promotion of and rewards for violent male norms/behaviour
- Combat strategies (e.g. torture or rape as a weapon of war)
- Absence of security and/or early warning mechanisms
- Impunity, including lack of legal framework and/or criminalization of forms of GBV, or lack of awareness that different forms of GBV are criminal
- Lack of inclusion of sex crimes committed during a humanitarian emergency into large-scale survivors’ reparations and support programmes (including for children born of rape)
- Economic, social and gender inequalities
- Lack of meaningful and active participation of women in leadership, peacebuilding processes, and security sector reform
- Lack of prioritization on prosecuting sex crimes; insufficient emphasis on increasing access to recovery services; and lack of foresight on the long-term ramifications for children born as a result of rape, specifically related to stigma and their resulting social exclusion
- Failure to address factors that contribute to violence such as long-term internment or loss of skills, livelihoods, independence, and/or male roles

#### Community-Level Contributing Factors
- Poor camp/shelter/WASH facility design and infrastructure (including for persons with disabilities, older persons and other at-risk groups)
- Lack of access to education for females, especially secondary education for adolescent girls
- Lack of safe shelters for women, girls and other at-risk groups
- Lack of training, vetting and supervision for humanitarian staff
- Lack of economic alternatives for affected populations, especially for women, girls and other at-risk groups
- Breakdown in community protective mechanisms and lack of community protections/sanctions relating to GBV
- Lack of reporting mechanisms for survivors and those at risk of GBV, as well as for sexual exploitation and abuse committed by humanitarian personnel
- Lack of accessible and trusted multi-sectoral services for survivors (health, security, legal/justice, mental health and psychosocial support)
- Absence/under-representation of female staff in key service provider positions (health care, detention facilities, police, justice, etc.)
- Inadequate housing, land and property rights for women, girls, children born of rape and other at-risk groups
- Presence of demobilized soldiers with norms of violence
- Hostile host communities
- ‘Blaming the victim’ or other harmful attitudes against survivors of GBV
- Lack of confidentiality for GBV survivors
- Community-wide acceptance of violence
- Lack of child protection mechanisms
- Lack of psychosocial support as part of disarmament, demobilization and reintegration (DDR) programming

#### Individual/Family-Level Contributing Factors
- Lack of basic survival needs/supplies for individuals and families or lack of safe access to these survival needs/supplies (e.g. food, water, shelter, cooking fuel, hygiene supplies, etc.)
- Gender-inequitable distribution of family resources
- Lack of resources for parents to provide for children and older persons (economic resources, ability to protect, etc.), particularly for woman and child heads of households
- Lack of knowledge/awareness of acceptable standards of conduct by humanitarian staff, and that humanitarian assistance is free
- Harmful alcohol/drug use
- Age, gender, education, disability
- Family history of violence
- Witnessing GBV
ESSENTIAL TO KNOW

Risks for a Growing Number of Refugees Living in Urban and Other Non-Camp Settings

A growing number and proportion of the world’s refugees are found in urban areas. As of 2009, UNHCR statistics suggested that almost half of the world’s 10.5 million refugees reside in cities and towns, compared to one third who live in camps. As well as increasing in size, the world’s urban refugee population is also changing in composition. In the past, a significant proportion of the urban refugees registered with UNHCR in developing and middle-income countries were young men. Today, however, large numbers of refugee women, children and older people are found in urban and other non-camp areas, particularly in those countries where there are no camps. They are often confronted with a range of protection risks, including the threat of arrest and detention, refoulement, harassment, exploitation, discrimination, inadequate and overcrowded shelter, HIV, human smuggling and trafficking, and other forms of violence. The recommendations within this TAG are relevant to livelihoods actors providing assistance to displaced populations living in urban and other non-camp settings, as well as those living in camps.

Key Considerations for At-Risk Groups

In any emergency, there are groups of individuals more vulnerable to harm than other members of the population. This is often because they hold less power in society, are more dependent on others for survival, are less visible to relief workers, or are otherwise marginalized. This TAG uses the term ‘at-risk groups’ to describe these individuals.

When sources of vulnerability—such as age, disability, sexual orientation, religion, ethnicity, etc.—intersect with gender-based discrimination, the likelihood of women’s and girls’ exposure to GBV can escalate. For example, adolescent girls who are forced into child marriage—a form of GBV itself—may be at greater risk of intimate partner violence than adult females. In the case of men and boys, gender-inequitable norms related to masculinity and femininity can increase their exposure to some forms of sexual violence. For example, men and boys in detention who are viewed by inmates as particularly weak (or ‘feminine’) may be subjected to sexual harassment, assault and rape. In some conflict-afflicted settings, some groups of males may not be protected from sexual violence because they are assumed to not be at risk by virtue of the privileges they enjoyed during peacetime.

Not all the at-risk groups listed below will always be at heightened risk of gender-based violence. Even so, they will very often be at heightened risk of harm in humanitarian settings. Whenever possible, efforts to address GBV should be alert to and promote the protection rights and needs of these groups. Targeted work with specific at-risk groups should be in collaboration with agencies that have expertise in addressing their needs. With due consideration for safety, ethics and feasibility, the particular experiences, perspectives and knowledge of at-risk groups should be solicited to inform work throughout all phases of the programme cycle. Specifically, livelihoods actors should:

• Be mindful of the protection rights and needs of these at-risk groups and how these may vary within and across different humanitarian settings;
• Consider the potential intersection of their specific vulnerabilities to GBV; and
• Plan interventions that strive to reduce their exposure to GBV and other forms of violence.
### Key Considerations for At-Risk Groups

<table>
<thead>
<tr>
<th>At-risk groups</th>

<th>Factors that contribute to increased risk of violence</th>
</tr>
</thead>
</table>
| **Adolescent girls** | • Sexual assault  
• Sexual exploitation and abuse  
• Child and/or forced marriage  
• Female genital mutilation/cutting (FGM/C)  
• Lack of access to education | • Age, gender and restricted social status  
• Increased domestic responsibilities that keep girls isolated in the home  
• Erosion of normal community structures of support and protection  
• Lack of access to understandable information about health, rights and services (including reproductive health)  
• Being discouraged or prevented from attending school  
• Early pregnancies and motherhood  
• Engagement in unsafe livelihoods activities  
• Loss of family members, especially immediate caretakers  
• Dependence on exploitative or unhealthy relationships for basic needs |
| **Elderly women** | • Sexual assault  
• Sexual exploitation and abuse  
• Exploitation and abuse by caregivers  
• Denial of rights to housing and property | • Age, gender and restricted social status  
• Weakened physical status, physical or sensory disabilities, and chronic diseases  
• Isolation and higher risk of poverty  
• Limited mobility  
• Neglected health and nutritional needs  
• Lack of access to understandable information about rights and services |
| **Woman and child heads of households** | • Sexual assault  
• Sexual exploitation and abuse  
• Child and/or forced marriage (including wife inheritance)  
• Denial of rights to housing and property | • Age, gender and restricted social status  
• Increased domestic responsibilities that keep them isolated in the home  
• Erosion of normal community structures of support and protection  
• Dependence on exploitative or unhealthy relationships for basic needs  
• Engagement in unsafe livelihoods activities |
| **Girls and women who bear children of rape, and their children born of rape** | • Sexual assault  
• Sexual exploitation and abuse  
• Intimate partner violence and other forms of domestic violence  
• Lack of access to education  
• Social exclusion | • Age, gender  
• Social stigma and isolation  
• Exclusion or expulsion from their homes, families and communities  
• Poverty, malnutrition and reproductive health problems  
• Lack of access to medical care  
• High levels of impunity for crimes against them  
• Dependence on exploitative or unhealthy relationships for basic needs  
• Engagement in unsafe livelihoods activities |
| **Indigenous women, girls, men and boys, and ethnic and religious minorities** | • Social discrimination, exclusion and oppression  
• Ethnic cleansing as a tactic of war  
• Lack of access to education  
• Lack of access to services  
• Theft of land | • Social stigma and isolation  
• Poverty, malnutrition and reproductive health problems  
• Lack of protection under the law and high levels of impunity for crimes against them  
• Lack of opportunities and marginalization based on their national, religious, linguistic or cultural group  
• Barriers to participating in their communities and earning livelihoods |
| **Lesbian, gay, bisexual, transgender and intersex (LGBTI) persons** | • Social exclusion  
• Sexual assault  
• Sexual exploitation and abuse  
• Domestic violence (e.g. violence against LGBTI children by their caretakers)  
• Denial of services  
• Harassment/sexual harassment  
• Rape expressly used to punish lesbians for their sexual orientation | • Discrimination based on sexual orientation and/or gender identity  
• High levels of impunity for crimes against them  
• Restricted social status  
• Transgender persons not legally or publicly recognized as their identified gender  
• Same-sex relationships not legally or socially recognized, and denied services other families might be offered  
• Exclusion from housing, livelihoods opportunities, and access to health care and other services  
• Exclusion of transgender persons from sex-segregated shelters, bathrooms and health facilities  
• Social isolation/rejection from family or community, which can result in homelessness  
• Engagement in unsafe livelihoods activities |
### Key Considerations for At-Risk Groups (continued)

| Separated or unaccompanied girls, boys and orphans, including children associated with armed forces/groups | • Sexual assault  
• Sexual exploitation and abuse  
• Child and/or forced marriage  
• Forced labour  
• Lack of access to education  
• Domestic violence | • Age, gender and restricted social status  
• Neglected health and nutritional needs  
• Engagement in unsafe livelihoods activities  
• Dependence on exploitative or unhealthy relationships for basic needs  
• Early pregnancies and motherhood  
• Social stigma, isolation and rejection by communities as a result of association with armed forces/groups  
• Active engagement in combat operations  
• Premature parental responsibility for siblings |
| Women and men involved in forced and/or coerced prostitution, and child victims of sexual exploitation | • Coercion, social exclusion  
• Sexual assault  
• Physical violence  
• Sexual exploitation and abuse  
• Lack of access to education | • Dependence on exploitative or unhealthy relationships for basic needs  
• Lack of access to reproductive health information and services  
• Early pregnancies and motherhood  
• Isolation and a lack of social support/peer networks  
• Social stigma, isolation and rejection by communities  
• Harassment and abuse from law enforcement  
• Lack of protection under the law and/or laws that criminalize sex workers |
| Women, girls, men and boys in detention | • Sexual assault as punishment or torture  
• Physical violence  
• Lack of access to education  
• Lack of access to health, mental health and psychosocial support, including psychological first aid | • Poor hygiene and lack of sanitation  
• Overcrowding of detention facilities  
• Failure to separate men, women, families and unaccompanied minors  
• Obstacles and disincentives to reporting incidents of violence (especially sexual violence)  
• Fear of speaking out against authorities  
• Possible trauma from violence and abuse suffered before detention |
| Women, girls, men and boys living with HIV | • Sexual harassment and abuse  
• Social discrimination and exclusion  
• Verbal abuse  
• Lack of access to education  
• Loss of livelihood  
• Prevented from having contact with their children | • Social stigma, isolation and higher risk of poverty  
• Loss of land, property and belongings  
• Reduced work capacity  
• Stress, depression and/or suicide  
• Family disintegration and breakdown  
• Poor physical and emotional health  
• Harmful use of alcohol and/or drugs |
| Women, girls, men and boys with disabilities | • Social discrimination and exclusion  
• Sexual assault  
• Sexual exploitation and abuse  
• Intimate partner violence and other forms of domestic violence  
• Lack of access to education  
• Denial of access to housing, property and livestock | • Limited mobility, hearing and vision resulting in greater reliance on assistance and care from others  
• Isolation and a lack of social support/peer networks  
• Exclusion from obtaining information and receiving guidance, due to physical, technological and communication barriers  
• Exclusion from accessing washing facilities, latrines or distribution sites due to poor accessibility in design  
• Physical, communication and attitudinal barriers in reporting violence  
• Barriers to participating in their communities and earning livelihoods  
• Lack of access to medical care and rehabilitation services  
• High levels of impunity for crimes against them  
• Lack of access to reproductive health information and services |
| Women, girls, men and boys who are survivors of violence | • Social discrimination and exclusion  
• Secondary violence as result of the primary violence (e.g. abuse by those they report to; honor killings following sexual assault; forced marriage to a perpetrator, etc.)  
• Heightened vulnerability to future violence, including sexual violence, intimate partner violence, sexual exploitation and abuse, etc. | • Weakened physical status, physical or sensory disabilities, psychological distress and chronic diseases  
• Lack of access to medical care, including obstacles and disincentives to reporting incidents of violence  
• Family disintegration and breakdown  
• Isolation and higher risk of poverty |
3. The Obligation to Address Gender-Based Violence in Humanitarian Work

“The Protection of all persons affected and at risk must inform humanitarian decision-making and response, including engagement with States and non-State parties to conflict. It must be central to our preparedness efforts, as part of immediate and life-saving activities, and throughout the duration of humanitarian response and beyond. In practical terms, this means identifying who is at risk, how and why at the very outset of a crisis and thereafter, taking into account the specific vulnerabilities that underlie these risks, including those experienced by men, women, girls and boys, and groups such as internally displaced persons, older persons, persons with disabilities, and persons belonging to sexual and other minorities.”

(International Standing Committee Principals’ statement on the Centrality of Protection in Humanitarian Action, endorsed December 2013 as part of a number of measures that will be adapted by the IASC to ensure more effective protection of people in humanitarian crises. Available at <www.globalprotectioncluster.org/en/tools-and-guidance/guidance-from-inter-agency-standing-committee.html>)

The primary responsibility to ensure that people are protected from violence rests with States. In situations of armed conflict, both State and non-State parties to the conflict have obligations in this regard under international humanitarian law. This includes refraining from causing harm to civilian populations and ensuring that people affected by violence get the care they need. When States or parties to conflict are unable and unwilling to meet their obligations, humanitarian actors play an important role in supporting measures to prevent and respond to violence. No single organization, agency or entity working in an emergency has the complete set of knowledge, skills, resources and authority to prevent GBV or respond to the needs of GBV survivors alone. Thus, collective effort is paramount: All humanitarian actors must be aware of the risks of GBV and—acting collectively to ensure a comprehensive response—prevent and mitigate these risks as quickly as possible within their areas of operation.

Failure to take action against GBV represents a failure by humanitarian actors to meet their most basic responsibilities for promoting and protecting the rights of affected populations. Inaction and/or poorly designed programmes can also unintentionally cause further harm. Lack of action or ineffective action contribute to a poor foundation for supporting the resilience, health and well-being of survivors, and create barriers to reconstructing affected communities’ lives and livelihoods. In some instances, inaction can serve to perpetuate the cycle of violence: Some survivors of GBV or other forms of violence may later become perpetrators if their medical, psychological and protection needs are not met. In the worst case, inaction can indirectly or inadvertently result in loss of lives.

The Centrality Statement further recognizes the role of the protection cluster to support protection strategies, including mainstreaming protection throughout all sectors. To support the realization of this, the Global Protection Cluster has committed to providing support and tools to other clusters, both at the global and field level, to help strengthen their capacity for protection mainstreaming. For more information see the Global Protection Cluster. 2014. Protection Mainstreaming Training Package, <www.globalprotectioncluster.org/en/areas-of-responsibility/protection-mainstreaming.html>.)
The responsibility of humanitarian actors to address GBV is supported by a framework that includes key elements highlighted in the diagram below. (For additional details of elements of the framework, see Annex 6 of the comprehensive Guidelines, available at <www.gbvguidelines.org>.)

It is important that those working in settings affected by humanitarian emergencies understand the framework’s key components and act in accordance with it. They must also use it to guide others—States, communities and individuals—to meet their obligations to promote and protect human rights.

**International and national law**: GBV violates principles that are covered by international humanitarian law, international and domestic criminal law, and human rights and refugee law at the international, regional and national levels. These principles include the protection of civilians even in situations of armed conflict and occupation, and their rights to life, equality, security, equal protection under the law, and freedom from torture and other cruel, inhumane or degrading treatment.

**United Nations Security Council resolutions**: Protection of Civilians (POC) lies at the centre of international humanitarian law and also forms a core component of international human rights, refugee, and international criminal law. Since 1999, the United Nations Security Council, with its United Nations Charter mandate to maintain or restore international peace and security, has become increasingly concerned with POC—with the Secretary-General regularly including it in his country reports to the Security Council and the Security Council providing it as a common part of peacekeeping mission mandates in its resolutions. Through this work on POC, the Security Council has recognized the centrality of women, peace and security by adopting a series of thematic resolutions on the issue. Of these, three resolutions (1325, 1889 and 2212) address women, peace and security broadly (e.g. women’s specific experiences of conflict and their contributions to conflict prevention, peacekeeping, conflict resolution and peacebuilding). The others (1820, 1888, 1960 and 2106) also reinforce women’s participation, but focus more specifically on conflict-related sexual violence. United Nations Security Council Resolution 2106 is the first to explicitly refer to men and boys as survivors of violence. The United Nations Security Council’s agenda also includes Children and Armed Conflict (CAAC)

**Humanitarian principles:** The humanitarian community has created global principles on which to improve accountability, quality and performance in the actions they take. These principles have an impact on every type of GBV-related intervention. They act as an ethical and operational guide for humanitarian actors on how to behave in an armed conflict, natural disaster or other humanitarian emergency.

United Nations agencies are guided by four humanitarian principles enshrined in two General Assembly resolutions: General Assembly Resolution 46/182 (1991) and General Assembly Resolution 58/114 (2004). These humanitarian principles include humanity, neutrality, impartiality and independence.

<table>
<thead>
<tr>
<th>Humanity</th>
<th>Neutrality</th>
<th>Impartiality</th>
<th>Independence</th>
</tr>
</thead>
<tbody>
<tr>
<td>Human suffering must be addressed whenever it is found. The purpose of humanitarian action is to protect life and health and ensure respect for human beings.</td>
<td>Humanitarian actors must not take sides in hostilities or engage in controversies of a political, racial, religious or ideological nature.</td>
<td>Humanitarian action must be carried out on the basis of need alone, giving priority to the most urgent cases of distress and making no distinctions on the basis of nationality, race, gender, religious belief, class or political opinions.</td>
<td>Humanitarian action must be autonomous from the political, economic, military or other objectives that any actors may hold with regard to areas where humanitarian action is being implemented.</td>
</tr>
</tbody>
</table>

Many humanitarian organizations have further committed to these principles by developing codes of conduct, and by observing the ‘do no harm’ principle and the principles of the Sphere Humanitarian Charter. The principles in this Charter recognize the following rights of all people affected by armed conflict, natural disasters and other humanitarian emergencies:

- The right to life with dignity
- The right to receive humanitarian assistance, including protection from violence
- The right to protection and security

**Humanitarian standards and guidelines:** Various standards and guidelines that reinforce the humanitarian responsibility to address GBV in emergencies have been developed and broadly endorsed by humanitarian actors. Many of these key standards are identified in Annex 6 of the comprehensive Guidelines, available at <www.gbvguidelines.org>.

---

### OBLIGATION TO ADDRESS GBV

**What the Sphere Handbook Says:**

**Guidance Note 13: Women and girls can be at particular risk of gender-based violence.**

When contributing to the protection of these groups, humanitarian agencies should particularly consider measures that reduce possible risks, including trafficking, forced prostitution, rape or domestic violence. They should also implement standards and instruments that prevent and eradicate the practice of sexual exploitation and abuse. This unacceptable practice may involve affected people with specific vulnerabilities, such as isolated or disabled women who are forced to trade sex for the provision of humanitarian assistance.

PART TWO
BACKGROUND TO LIVELIHOODS GUIDANCE
1. Content Overview of Livelihoods Guidance

This section provides an overview of the recommendations detailed in Part Three: Livelihoods Guidance. The information below:

- Describes the summary fold-out table of essential actions presented at the beginning of Part Three, designed as a quick reference tool for livelihoods actors.
- Introduces the programme cycle, which is the framework for all the recommendations within Part Three.
- Reviews the guiding principles for addressing GBV and summarizes how to apply these principles through four inter-linked approaches: the human rights-based approach, survivor-centred approach, community-based approach and systems approach.

Summary Fold-Out Table of Essential Actions

Part Three begins with a summary fold-out table for use as a quick reference tool. The fold-out table links key recommendations made in the body of Part Three with guidance on when the recommendations should be applied across four stages of emergency: Pre-emergency/preparedness (before the emergency and during ongoing preparedness planning), Emergency (when the emergency strikes), Stabilized Stage (when immediate emergency needs have been addressed), and Recovery to Development (when the focus is on facilitating returns of displaced populations, rebuilding systems and structures, and transitioning to development). In practice, the separation between different stages is not always clear; most emergencies do not follow a uniformly linear progression, and stages may overlap and/or revert. The stages are therefore only indicative.

ESSENTIAL TO KNOW

Emergency Preparedness and Contingency Planning

“Experience confirms that effective humanitarian response at the onset of a crisis is heavily influenced by the level of preparedness and planning of responding agencies/organizations, as well as the capacities and resources available to them.”

In the summary fold-out table, the points listed under ‘pre-emergency/preparedness’ are not strictly limited to actions that can be taken before an emergency strikes. These points are also relevant to ongoing preparedness planning, the goal of which is to anticipate and solve problems in order to facilitate rapid response when a particular setting is struck by another emergency. In natural disasters, on-going preparedness is often referred to as ‘contingency planning’ and is part of all stages of humanitarian response.

Slow-onset emergencies such as drought may follow a different pattern from rapid-onset disasters. Even so, the risks of GBV and the humanitarian needs of affected populations remain the same. The recommendations in this TAG are applicable to all types of emergency.
In the summary fold-out table, livelihoods-specific **minimum commitments**2 appear in bold. These minimum commitments represent critical actions that livelihoods actors can prioritize in the earliest stages of emergency when resources and time are limited. As soon as the acute emergency has subsided (anywhere from two weeks to several months, depending on the setting), additional essential actions outlined in the summary fold-out table—and elaborated in the subsequent guidance—should be initiated and/or scaled up. Each recommendation should be adapted to the particular context, always taking into account the essential rights, expressed needs and identified resources of target community.

### Essential Actions Outlined according to the Programme Cycle Framework

Following the summary fold-out table, the guidance is organized according to five elements of a programme cycle. Each element of the programme cycle is designed to link with and support the other elements. **While coordination is presented as its own separate element, it should be considered and integrated throughout the entirety of the programme cycle.** The five elements3 are presented as follows:

<table>
<thead>
<tr>
<th>Element</th>
<th>Description</th>
</tr>

---

2 Note that the minimum commitments do not always come first under each programme cycle category of the summary table. This is because all the actions are organized in chronological order according to an ideal model for programming. When it is not possible to implement all actions—particularly in the early stages of an emergency—the minimum commitments should be prioritized and the other actions implemented at a later date.

3 These elements of the programme cycle are an adaptation of the Humanitarian Programme Cycle (HPC). The HPC has been slightly adjusted within this TAG to simplify presentation of key information. The HPC is a core component of the Transformative Agenda, aimed at improving humanitarian actors’ ability to prepare for, manage and deliver assistance. For more information about the HPC, see: [www.humanitarianresponse.info/programme-cycle/space](http://www.humanitarianresponse.info/programme-cycle/space).
Integrated throughout these stages is the concept of early recovery as a multidimensional process. Early recovery begins in the early days of a humanitarian response and should be considered systematically throughout. Employing an early recovery approach means:

“focusing on local ownership and strengthening capacities; basing interventions on a thorough understanding of the context to address root causes and vulnerabilities as well as immediate results of crisis; reducing risk, promoting equality and preventing discrimination through adherence to development principles that seek to build on humanitarian programmes and catalyse sustainable development opportunities. It aims to generate self-sustaining, nationally-owned, resilient processes for post-crisis recovery and to put in place preparedness measures to mitigate the impact of future crises.”

In order to facilitate early recovery, GBV prevention and mitigation strategies should be integrated into programmes from the beginning of an emergency in ways that protect and empower women, girls and other at-risk groups. These strategies should also address underlying causes of GBV (particularly gender inequality) and develop evidence-based programming and tailored assistance.

**Element 1: Assessment, Analysis and Planning**

The programme cycle begins with a list of recommended GBV-related questions or ‘prompts’. These prompts highlight areas for investigation that can be selectively incorporated into various assessments and routine monitoring undertaken by livelihoods actors. The questions link to the recommendations under the heading ‘Implementation’ and the three main types of responsibilities therein (see Element 3 below):

- Programming;
- Policies; and
- Communications and Information Sharing.

---

**ESSENTIAL TO KNOW**

**Initiating Risk-Reduction Interventions without Assessments**

While assessments are an important foundation for programme design and implementation, they are not required in order to put in place some essential GBV prevention and mitigation measures prior to or from the onset of an emergency. Many risk-reduction interventions can be introduced without conducting an assessment. For example, livelihoods actors can support the installation of adequate lighting and/or the establishment of safety patrols along travel routes commonly used for livelihoods activities.
In addition to the prompts of what to assess, other key points should be considered when designing assessments:

### Who to Assess
- Key stakeholders and actors providing services in the community
- GBV, gender and diversity specialists
- Males and females of all ages and backgrounds of the affected community, particularly women, girls and other at-risk groups
- Community leaders
- Community-based organizations (e.g. organizations for women, adolescents/youth, persons with disabilities, older persons, etc.)
- Representatives of humanitarian response sectors
- Local and national governments
- Members of receptor/host communities in IDP/refugee settings

### When to Assess
- At the outset of programme planning
- At regular intervals for monitoring purposes

### How to Assess
- Review available secondary data (existing assessments/studies; qualitative and quantitative information; IDP/refugee registration data; etc.);
- Conduct regular consultations with key stakeholders, including relevant grass-roots organizations, civil societies and government agencies
- Carry out key informant interviews
- Conduct focus group discussions with community members that are age-, gender-, and culturally appropriate (e.g. participatory assessments held in consultation with men, women, girls and boys, separately when necessary)
- Carry out site observation
- Perform site safety mapping
- Conduct analysis of national legal frameworks related to GBV and whether they provide protection to women, girls and other at-risk groups

When designing assessments, livelihoods actors should apply ethical and safety standards that are age-, gender-, and culturally sensitive and prioritize the well-being of all those engaged in the assessment process. Wherever possible—and particularly when any component of the assessment involves communication with community stakeholders—investigations should be designed and undertaken according to participatory processes that engage the entire community, and most particularly women, girls, and other at-risk groups. This requires, as a first step, ensuring equal participation of women and men on assessment teams, as stipulated in the IASC Gender Handbook. Other important considerations are listed below.

---

### DOs and DON'Ts for Conducting Assessments That Include GBV-Related Components

<table>
<thead>
<tr>
<th>DOs</th>
<th>DON'Ts</th>
</tr>
</thead>
<tbody>
<tr>
<td>• Do consult GBV, gender and diversity specialists throughout the planning, design, analysis and interpretation of assessments that include GBV-related components.</td>
<td>• Don’t share data that may be linked back to a group or an individual, including GBV survivors.</td>
</tr>
<tr>
<td>• Do use local expertise where possible.</td>
<td>• Don’t probe too deeply into culturally sensitive or taboo topics (e.g. gender equality, reproductive health, sexual norms and behaviours, etc.) unless relevant experts are part of the assessment team.</td>
</tr>
<tr>
<td>• Do strictly adhere to safety and ethical recommendations for researching GBV.</td>
<td>• Don’t single out GBV survivors: Speak with women, girls and other at-risk groups in general and not explicitly about their own experiences.</td>
</tr>
<tr>
<td>• Do consider cultural and religious sensitivities of communities.</td>
<td>• Don’t make assumptions about which groups are affected by GBV, and don’t assume that reported data on GBV or trends in reports represent actual prevalence and trends in the extent of GBV.</td>
</tr>
<tr>
<td>• Do conduct all assessments in a participatory way by consulting women, girls, men and boys of all backgrounds, including persons with specific needs. The unique needs of at-risk groups should be fairly represented in assessments in order to tailor interventions.</td>
<td>• Don’t collect information about specific incidents of GBV or prevalence rates without assistance from GBV specialists.</td>
</tr>
<tr>
<td>• Do conduct inter-agency or multi-sectoral assessments promoting the use of common tools and methods and encourage transparency and dissemination of the findings.</td>
<td></td>
</tr>
<tr>
<td>• Do include GBV specialists on inter-agency and inter-sectoral teams.</td>
<td></td>
</tr>
<tr>
<td>• Do conduct ongoing assessments of GBV-related programming issues to monitor the progress of activities and identify gaps or GBV-related protection issues that arise unexpectedly. Adjust programmes as needed.</td>
<td></td>
</tr>
<tr>
<td>• Do ensure that an equal number of female and male assessors and translators are available to provide age-, gender-, and culturally appropriate environments for those participating in assessments, particularly women and girls.</td>
<td></td>
</tr>
<tr>
<td>• Do conduct consultations in a secure setting where all individuals feel safe to contribute to discussions. Conduct separate women’s groups and men’s groups, or individual consultations when appropriate, to counter exclusion, prejudice and stigma that may impede involvement.</td>
<td></td>
</tr>
<tr>
<td>• Do provide training for assessment team members on ethical and safety issues. Include information in the training about appropriate systems of care (i.e. referral pathways) that are available for GBV survivors, if necessary.</td>
<td></td>
</tr>
<tr>
<td>• Do provide information about how to report risk and/or where to access care—especially at health facilities—for anyone who may report risk of or exposure to GBV during the assessment process.</td>
<td></td>
</tr>
<tr>
<td>• Do include—when appropriate and there are no security risks—government officials, line ministries and sub-ministries in assessment activities.</td>
<td></td>
</tr>
</tbody>
</table>

The information collected during various assessments and routine monitoring will help to identify the relationship between GBV risks and livelihoods programming. The data can highlight priorities and gaps that need to be addressed when planning new programmes or adjusting existing programmes, such as:

- Safety and security risks for particular groups within the affected population.
- Unequal access to services for women, girls and other at-risk groups.
- Global and national sector standards related to protection, rights and GBV risk reduction that are not applied (or do not exist) and therefore increase GBV-related risks.
- Lack of participation by some groups in the planning, design, implementation, and monitoring and evaluation of programmes, and the need to consider age-, gender-, and culturally appropriate ways of facilitating participation of all groups.
- The need to advocate for and support the deployment of GBV specialists within the livelihoods sector.

Data can also be used to inform common response planning processes, which serve as the basis for resource mobilization in some contexts. As such, it is essential that GBV be adequately addressed and integrated into joint planning and strategic documents—such as the Humanitarian Programme Cycle, the OCHA Minimum Preparedness Package (MPP), the Multi-Cluster/Sector Initial Rapid Assessment (MIRA), and Strategic Response Plans (SRPs).

---

**ESSENTIAL TO KNOW**

*Investigating GBV-Related Safety and Security Issues When Undertaking Assessments*

It is the responsibility of all humanitarian actors to work within a protection framework and understand the safety and security risks that women, girls, men and boys face. Therefore it is extremely important that assessment and monitoring of general safety issues be an ongoing feature of assistance. This includes exploring—through a variety of entry points and participatory processes—when, why and how GBV-related safety issues might arise, particularly as the result of delivery or use of humanitarian services. However, **GBV survivors should not be sought out or targeted as a specific group during assessments. GBV-specific assessments—which include investigating specific GBV incidents, interviewing survivors about their specific experiences, or conducting research on the scope of GBV in the population**—**should be conducted only in collaboration with GBV specialists and/or a GBV-specialized partner or agency.** Training in gender, GBV, women’s human rights, social exclusion and sexuality—and how these inform assessment practices—should be conducted with relevant livelihoods staff. To the extent possible, assessments should be locally designed and led, ideally by relevant local government actors and/or programme administrators and with the participation of the community. When non-GBV specialists receive specific reports of GBV during general assessment activities, they should share the information with GBV specialists according to safe and ethical standards that ensure confidentiality and, if requested by survivors, anonymity of survivors.
**Element 2: Resource Mobilization**

Resource mobilization most obviously refers to accessing funding in order to implement programming—either through specific donors or linked to coordinated humanitarian funding mechanisms. (For more information on funding mechanisms, see Annex 7 of the comprehensive Guidelines, available at <www.gbvguidelines.org>.) This TAG aims to reduce the challenges of accessing GBV-related funds by outlining key GBV-related issues to be considered when drafting proposals.

In addition to the livelihoods-specific funding points presented under the ‘Resource Mobilization’ subsection of Part Three, all humanitarian actors should consider the following general points:

<table>
<thead>
<tr>
<th>Components of a Proposal</th>
<th>GBV-Related Points to Consider for Inclusion</th>
</tr>
</thead>
</table>
| **HUMANITARIAN NEEDS OVERVIEW** | - Describe vulnerabilities of women, girls and other at-risk groups in the particular setting  
- Describe and analyse risks for specific forms of GBV (e.g. sexual assault, forced and/or coerced prostitution, child and/or forced marriage, intimate partner violence and other forms of domestic violence), rather than a broader reference to ‘GBV’  
- Illustrate how those believed to be at risk of GBV have been identified and consulted on GBV-related priorities, needs and rights |
| **PROJECT RATIONALE/ JUSTIFICATION** | - Explain the GBV-related risks that are linked to the sector’s area of work  
- Describe which groups are being targeted in this action and how the targeting is informed by vulnerability criteria and inclusion strategies  
- Describe whether women, girls and other at-risk groups are part of decision-making processes and what mechanisms have been put in place to empower them  
- Explain how these efforts will link with and support other efforts to prevent and mitigate specific types of GBV in the affected community |
| **PROJECT DESCRIPTION** | - Illustrate how activities are linked with those of other humanitarian actors/sectors  
- Explain which activities may help in changing or improving the environment to prevent GBV (e.g. by better monitoring and understanding the underlying causes and contributing factors of GBV)  
- Describe mechanisms that facilitate reporting of GBV, and ensure appropriate follow-up in a safe and ethical manner  
- Describe relevant linkages with GBV specialists and GBV coordination mechanisms  
- Consider how the project promotes and rebuilds community systems and structures that ensure the participation and safety of women, girls and other at-risk groups |
| **MONITORING AND EVALUATION PLAN** | - Outline a monitoring and evaluation plan to track progress as well as any adverse effects of GBV-related activities on the affected population  
- Illustrate how the monitoring and evaluation strategies include the participation of women, girls and other at-risk groups  
- Include outcome level indicators from the Indicator Sheets in Part Three of this TAG to measure programme impact on GBV-related risks  
- Where relevant, describe a plan for adjusting the programme according to monitoring outcomes  
- Disaggregate indicators by sex, age, disability and other relevant vulnerability factors |
Importantly, resource mobilization is not limited to soliciting funds. When planning for and implementing GBV prevention and response activities, livelihoods actors should:

- Mobilize human resources by making sure that partners within the livelihoods sector:
  - Have been trained in and understand issues of gender, GBV, women’s/human rights, social exclusion and sexuality.
  - Are empowered to integrate GBV risk-reduction strategies into their work.
- Employ and retain women and other at-risk groups as staff, and ensure their active participation and leadership in all livelihoods-related community activities.
- Pre-position age-, gender-, and culturally sensitive supplies where necessary and appropriate.
- Pre-position accessible GBV-related community outreach material.
- Advocate with the donor community so that donors recognize GBV prevention, mitigation and response interventions as life-saving, and support the costs related to improving intra- and inter-sector capacity to address GBV.
- Ensure that government and humanitarian policies related to livelihoods programming integrate GBV concerns and include strategies for ongoing budgeting of activities.

**Element 3: Implementation**

The ‘Implementation’ subsection provides guidance for putting GBV-related risk-reduction responsibilities into practice. The information is intended to:

- Describe a set of activities that, taken together, establish shared standards and improve the overall quality of GBV-related prevention and mitigation strategies in humanitarian settings.
- Establish GBV-related responsibilities that should be undertaken by all livelihoods actors, regardless of available data on GBV incidents.
- Maximize immediate protection of GBV survivors and persons at risk.
- Foster longer-term interventions that work towards the elimination of GBV.
Three main types of responsibilities—programming, policies, and communications and information sharing—correspond to and elaborate upon the suggested areas of inquiry outlined under the subsection ‘Assessment, Analysis and Planning’. Each targets a variety of livelihoods actors.

1) **Programming**: Targets NGOs, community-based organizations (including the National Red Cross/Red Crescent Society), INGOs, United Nations agencies, and national and local governments to encourage them to:
   - Support the involvement of women, girls and other at-risk groups within the affected population as programme staff and as leaders in governance mechanisms and community decision-making structures.
   - Implement programmes that (1) reflect awareness of the particular GBV risks faced by women, girls and other at-risk groups, and (2) address their rights and needs related to safety and security.
   - Integrate GBV prevention and mitigation into activities.

2) **Policies**: Targets programme planners, advocates, and national and local policymakers to encourage them to:
   - Incorporate GBV prevention and mitigation strategies into livelihoods programme policies, standards and guidelines from the earliest stages of the emergency.
   - Support the integration of GBV risk-reduction strategies into national and local development policies and plans and allocate funding for sustainability.
   - Support the revision and adoption of national and local laws and policies (including customary laws and policies) that promote and protect the rights of women, girls and other at-risk groups.

3) **Communications and Information Sharing**: Targets programme and community outreach staff to encourage them to:
   - Work with GBV specialists in order to identify safe, confidential and appropriate systems of care (i.e. referral pathways) for GBV survivors; incorporate basic GBV messages into livelihoods-related community outreach and awareness-raising activities; and develop information-sharing standards that promote confidentiality and ensure anonymity of survivors. In the early stages of an emergency, services may be quite limited; referral pathways should be adjusted as services expand.

---

**ESSENTIAL TO KNOW**

**Active Participation of Women, Girls and Other At-Risk Groups**

Commitment 4 of the IASC Principals’ Commitments on Accountability to Affected Populations (CAAP) highlights the importance of enabling affected populations to play a decision-making role in processes that affect them. This is reflected in recommendations within this TAG that promote the active participation of women, girls and other at-risk groups in assessment processes and as staff and leaders in community-based structures. Involving women, girls, and other at-risk groups in all aspects of livelihoods programming is essential to fulfilling the guiding principles and approaches discussed later in this section. However, such involvement—especially as leaders or managers—can be risky in some settings. Therefore the recommendations throughout this TAG aimed at greater inclusion of women, girls and other at-risk groups (e.g. striving for 50 per cent representation of females in programme staff) may need to be adjusted to the context. Due caution must be exercised where their inclusion poses a potential security risk or increases their risk of GBV. Approaches to their involvement should be carefully contextualized.
Mental Health and Psychosocial Support: Providing Referrals and Psychological First Aid

The term ‘mental health and psychosocial support’ (MHPSS) is used to describe any type of local or outside support that aims to protect or promote psychosocial well-being and/or prevent or treat mental disorder (IASC, 2007). The experience of GBV can be a very distressing event for a survivor. All survivors should have access to supportive listeners in their families and communities, as well as additional GBV-focused services should they choose to access them. Often the first line of focused services will be through community-based organizations, in which trained GBV support workers provide case management and resiliency-based mental health care. Some survivors—typically a relatively small number—may require more targeted mental health care from an expert experienced in addressing GBV-related mental health issues (e.g. when survivors are not improving according to a care plan, or when caseworkers have reason to believe survivors may be at risk of hurting themselves or someone else).

As part of care and support for people affected by GBV, the humanitarian community plays a crucial role in ensuring survivors gain access to GBV-focused community-based care services and, as necessary and available, more targeted mental health care provided by GBV and trauma-care experts. Survivors may also wish to access legal/justice support and police protection. Providing information to survivors in an ethical, safe and confidential manner about their rights and options to report risk and access care is a responsibility of all humanitarian actors who interact with affected populations. Survivors may also wish to access legal/justice support and police protection.

Providing information to survivors in an ethical, safe and confidential manner about their rights and options to report risk and access care is a responsibility of all humanitarian actors who interact with affected populations. Livelihoods actors should work with GBV specialists to identify systems of care (i.e. referral pathways) that can be mobilized if a survivor reports exposure to GBV.

For all livelihoods personnel who engage with affected populations, it is important not only to be able to offer survivors up-to-date information about access to services, but also to know and apply the principles of psychological first aid. Even without specific training in GBV case management, non-GBV specialists can go a long way in assisting survivors by responding to their disclosures in a supportive, non-stigmatizing, survivor-centred manner. (For more information about the survivor-centred approach, see ‘Guiding Principles’, below).

Psychological first aid (PFA) describes a humane, supportive response to a fellow human being who is suffering and who may need support. Providing PFA responsibly means to:

1. Respect safety, dignity and rights.
2. Adapt what you do to take account of the person’s culture.
3. Be aware of other emergency response measures.
4. Look after yourself.

PREPARE

- Learn about the crisis event.
- Learn about available services and supports.
- Learn about safety and security concerns.

Receive training on issues of gender, GBV, women’s/human rights, social exclusion, sexuality and psychological first aid (e.g. how to engage supportively with survivors and provide information in an ethical, safe and confidential manner about their rights and options to report risk and access care).
The three basic action principles of PFA presented below—look, listen and link—can help livelihoods actors with how they view and safely enter a crisis situation, approach affected people and understand their needs, and link them with practical support and information.

**Dos**

- Be honest and trustworthy.
- Respect people’s right to make their own decisions.
- Be aware of and set aside your own biases and prejudices.
- Make it clear to affected people that even if they refuse help now, they can still access help in the future.
- Respect privacy and keep the person’s story confidential, if this is appropriate.
- Behave appropriately by considering the person’s culture, age and gender.

**Don’ts**

- Don’t exploit your relationship as a helper.
- Don’t ask the person for any money or favour for helping them.
- Don’t make false promises or give false information.
- Don’t exaggerate your skills.
- Don’t force help on people and don’t be intrusive or pushy.
- Don’t pressure people to tell you their stories.
- Don’t share the person’s story with others.
- Don’t judge the people for their actions or feelings.

The following chart identifies ethical dos and don’ts in providing PFA. These are offered as guidance to avoid causing further harm to the person; provide the best care possible; and act only in their best interests. These ethical dos and don’ts reinforce a survivor-centred approach. In all cases, livelihoods actors should offer help in ways that are most appropriate and comfortable to the people they are supporting, given the cultural context. In any situation where a livelihoods actor feels unsure about how to respond to a survivor in a safe, ethical and confidential manner, she or he should contact a GBV specialist for guidance.

Element 4: Coordination

Given its complexities, GBV is best addressed when multiple sectors, organizations and disciplines work together to create and implement unified prevention and mitigation strategies. In an emergency context, actors leading humanitarian interventions (e.g. the Office for the Coordination of Humanitarian Affairs; the Resident Coordinator/Humanitarian Coordinator; the Deputy Special Representative of the Secretary-General/Resident Coordinator/Humanitarian Coordinator; UNHCR; etc.) can facilitate coordination that ensures GBV-related issues are prioritized and dealt with in a timely manner. Effective coordination can strengthen accountability, prevent a ‘silied’ effect, and ensure that agency-specific and intra-sectoral GBV action plans are in line with those of other sectors, reinforcing a cross-sectoral approach.

The ‘Coordination’ subsection of Part Three provides guidance on key GBV-related areas for cross-sectoral coordination. This guidance targets NGOs, community-based organizations (including National Red Cross/Red Crescent Societies), INGOs and United Nations agencies, national and local governments, and humanitarian coordination leadership—such as line ministries, humanitarian coordinators, sector coordinators and donors. Leaders of livelihoods coordination mechanisms should also undertake the following:

- Put in place mechanisms for regularly addressing GBV at livelihoods coordination meetings, such as including GBV issues as a regular agenda item and soliciting the involvement of GBV specialists in relevant livelihoods coordination activities.
- Coordinate and consult with gender specialists and, where appropriate, diversity specialists or networks (e.g. disability, LGBTI, older persons, etc.) to ensure specific issues of vulnerability—which may otherwise be overlooked—are adequately represented and addressed.
- Develop monitoring systems that allow livelihoods programmes

ESSENTIAL TO KNOW

Accessing the Support of GBV Specialists

Livelihoods coordinators and livelihoods actors should identify and work with the chair (and co-chair) of the GBV coordination mechanism where one exists. (Note: GBV coordination mechanisms may be chaired by government actors, NGOs, INGOs and/or United Nations agencies, depending on the context.) They should also encourage a livelihoods focal point to participate in GBV coordination meetings, and encourage the GBV chair/co-chair (or other GBV coordination group member) to participate in livelihoods coordination meetings. Whenever necessary, livelihoods coordinators and livelihoods actors should seek out the expertise of GBV specialists to assist with implementing the recommendations presented in this TAG.

GBV specialists can ensure the integration of protection principles and GBV risk-reduction strategies into ongoing livelihoods programming. These specialists can advise, assist and support coordination efforts through specific activities, such as:

- Conducting GBV-specific assessments.
- Ensuring appropriate services are in place for survivors.
- Developing referral systems and pathways.
- Providing case management for GBV survivors.
- Developing trainings for livelihoods actors on gender, GBV, women’s/human rights, and how to respectfully and supportively engage with survivors.

GBV experts neither can nor should have specialized knowledge of the livelihoods sector, however. Efforts to integrate GBV risk-reduction strategies into livelihoods responses should be led by livelihoods actors to ensure that any recommendations from GBV actors are relevant and feasible within the sectoral response.

In settings where the GBV coordination mechanism is not active, livelihoods coordinators and livelihoods actors should seek support from local actors with GBV-related expertise (e.g. social workers, women’s groups, protection officers, child protection specialists, etc.) as well as the Global GBV AoR. (Relevant contacts are provided on the GBV AoR website, <www.gbvaor.net>.)
to track their own GBV-related activities (e.g. include GBV-related activities in the sector’s 3/4/5W form used to map out actors, activities and geographic coverage).

- Submit joint proposals for funding to ensure that GBV has been adequately addressed in livelihoods programming response.
- Develop and implement livelihoods work plans with clear milestones that include GBV-related inter-agency actions.
- Support the development and implementation of sector-wide policies, protocols and other tools that integrate GBV prevention and mitigation.
- Form strategic partnerships and networks to conduct advocacy for improved programming and to meet the responsibilities set out in this TAG (with due caution regarding the safety and security risks for humanitarian actors, survivors and those at risk of GBV who speak publicly about the problem of GBV).

### Element 5: Monitoring and Evaluation

Monitoring and evaluation (M&E) is a critical tool for planning, budgeting resources, measuring performance and improving future humanitarian response. Continuous routine monitoring ensures that effective programmes are maintained and accountability to all stakeholders—especially affected populations—is improved. Periodic evaluations supplement monitoring data by analyzing in greater depth the strengths and weaknesses of implemented activities, and by measuring improved outcomes in the knowledge, attitudes and behaviour of affected populations and humanitarian workers. Implementing partners and donors can use the information gathered through M&E to share lessons learned among field colleagues and the wider humanitarian community. This TAG primarily focuses on indicators that strengthen livelihoods programme monitoring to avoid the collection of GBV incident data and more resource-intensive evaluations. (For general information on M&E, see resources available to guide real-time and final programme

### ESSENTIAL TO KNOW

**Advocacy**

Advocacy is the deliberate and strategic use of information—by individuals or groups of individuals—to bring about positive change at the local, national and international levels. By working with GBV specialists and a wide range of partners, livelihoods actors can help promote awareness of GBV and ensure safe, ethical and effective interventions. They can highlight specific GBV issues in a particular setting through the use of effective communication strategies and different types of products, platforms and channels, such as: press releases, publications, maps and media interviews; different web and social media platforms; multimedia products using video, photography and graphics; awareness-raising campaigns; and essential information channels for affected populations. All communication strategies must adhere to standards of confidentiality and data protection when using stories, images or photographs of survivors for advocacy purposes.

### GBV Case Reporting

For a number of safety, ethical and practical reasons, this TAG does not recommend using the number of reported cases (either increase or decrease) as an indicator of success. As a general rule, GBV specialists or those trained on GBV research should undertake data collection on cases of GBV.
evaluations such as ALNAP’s *Evaluating Humanitarian Action Guide*, <www.alnap.org/eha>. For GBV-specific resources on M&E, see Annex 1 of the comprehensive Guidelines, available at <www.gbvguidelines.org>.

The ‘Monitoring and Evaluation’ subsection of Part Three includes a non-exhaustive set of indicators for monitoring and evaluating the recommended activities at each phase of the programme cycle. Most indicators have been designed so they can be incorporated into existing livelihoods M&E tools and processes, in order to improve information collection and analysis without the need for additional data collection mechanisms. Livelihoods actors should select indicators and set appropriate targets prior to the start of an activity and adjust them to meet the needs of the target population as the project progresses. There are suggestions for collecting both quantitative data (through surveys and 3/4/5W matrices) and qualitative data (through focus group discussions, key informant interviews and other qualitative methods). Qualitative information helps to gather greater depth on participants’ perceptions of programmes. Some indicators require a mix of qualitative and quantitative data to better understand the quality and effectiveness of programmes.

**ESSENTIAL TO KNOW**

**Ethical Considerations**

Though GBV-related data presents a complex set of challenges, the indicators in this TAG are designed so that the information can be safely and ethically collected and reported by livelihoods actors who do not have extensive GBV expertise. However, it is the responsibility of all livelihoods actors to ensure safety, confidentiality and informed consent when collecting or sharing data. See above, ‘Element 1: Assessment, Analysis and Planning’, for further information.

It is crucial that the data not only be collected and reported, but also analysed with the goal of identifying where modifications may be beneficial. In this regard, sometimes ‘failing’ to meet a target can provide some of the most valuable opportunities for learning. For example, if a programme has aimed for 50 per cent female participation in assessments but falls short of reaching that target, it may consider changing the time and/or location of the consultations, or speaking with the affected community to better understand the barriers to female participation. The knowledge gained through this process has the potential to strengthen livelihoods interventions even beyond the actions taken related to GBV. Therefore, indicators should be analysed and reported using a ‘GBV lens’. This involves considering the ways in which all information—including information that may not seem ‘GBV-related’—could have implications for GBV prevention and mitigation.

Lastly, livelihoods actors should disaggregate indicators by sex, age, disability and other relevant vulnerability factors to improve the quality of the information they collect and to deliver programmes more equitably and efficiently. See ‘Key Considerations for At-Risk Groups’ in Part One: *Introduction* for more information on vulnerability factors.
2. Guiding Principles and Approaches for Addressing Gender-Based Violence

The following principles are inextricably linked to the overarching humanitarian responsibility to provide protection and assistance to those affected by a crisis. They serve as the foundation for all humanitarian actors when planning and implementing GBV-related programming. These principles state that:

▷ GBV encompasses a wide range of human rights violations.
▷ Preventing and mitigating GBV involves promoting gender equality and promoting beliefs and norms that foster respectful, non-violent gender norms.
▷ Safety, respect, confidentiality and non-discrimination in relation to survivors and those at risk are vital considerations at all times.
▷ GBV-related interventions should be context-specific in order to enhance outcomes and ‘do no harm’.
▷ Participation and partnership are cornerstones of effective GBV prevention.

These principles can be put into practice by applying the four essential and interrelated approaches described below.

1. Human Rights-Based Approach

A human rights-based approach seeks to analyse the root causes of problems and to redress discriminatory practices that impede humanitarian intervention. This approach is often contrasted with the needs-based approach, in which interventions aim to address practical, short-term emergency needs through service delivery. Although a needs-based approach includes affected populations in the process, it often stops short of addressing policies and regulations that can contribute to sustainable systemic change.

By contrast, the human rights-based approach views affected populations as ‘rights-holders’, and recognizes that these rights can be realized only by supporting the long-term empowerment of affected populations through sustainable solutions. This approach seeks to attend to rights as well as needs; how those needs are determined and addressed is informed by legal and human rights frameworks.
moral obligations and accountability. Humanitarian actors, along with states (where they are functioning), are seen as ‘duty-bearers’ who are bound by their obligations to encourage, empower and assist ‘rights-holders’ in claiming their rights. A human rights-based approach requires those who undertake GBV-related programming to:

- Assess the capacity of rights-holders to claim their rights (identifying the immediate, underlying and structural causes for non-realization of rights) and to participate in the development of solutions that affect their lives in a sustainable way.
- Assess the capacities and limitations of duty-bearers to fulfill their obligations.
- Develop sustainable strategies for building capacities and overcoming these limitations of duty-bearers.
- Monitor and evaluate both outcomes and processes, guided by human rights standards and principles and using participatory approaches.
- Ensure programming is informed by the recommendations of international human rights bodies and mechanisms.

2. Survivor-Centred Approach

A survivor-centred approach means that the survivor’s rights, needs and wishes are prioritized when designing and developing GBV-related programming. The illustration above contrasts survivor’s rights (in the left-hand column) with the negative impacts a survivor may experience when the survivor-centred approach is not employed.

A survivor-centred approach can guide professionals—regardless of their role—in their engagement with persons who have experienced GBV. It aims to create a supportive environment in which a GBV survivor’s rights are respected, safety is ensured, and the survivor is treated with dignity and respect. The approach helps to promote a survivor’s recovery and strengthen her or his ability to identify and express needs and wishes; it also reinforces the person’s capacity to make decisions about possible interventions (adapted from IASC Gender SWG and GBV AoR, 2010).
3. Community-Based Approach

A community-based approach insists that affected populations should be leaders and key partners in developing strategies related to their assistance and protection. From the earliest stage of the emergency, all those affected should “participate in making decisions that affect their lives” and have “a right to information and transparency” from those providing assistance. The community-based approach:

- Allows for a process of direct consultation and dialogue with all members of communities, including women, girls and other at-risk groups.
- Engages groups who are often overlooked as active and equal partners in the assessment, design, implementation, monitoring and evaluation of assistance.
- Ensures all members of the community will be better protected, their capacity to identify and sustain solutions strengthened and humanitarian resources used more effectively (adapted from UNHCR, 2008).

4. Systems Approach

Using a systems approach means analyzing GBV-related issues across an entire organization, sector and/or humanitarian system to come up with a combination of solutions most relevant to the context. The systems approach can be applied to introduce systemic changes that improve GBV prevention and mitigation efforts—both in the short term and in the long term. Livelihoods actors can apply a systems approach in order to:

- Strengthen agency/organizational/sectoral commitment to gender equality and GBV-related programming.
- Improve livelihoods actors’ knowledge, attitudes and skills related to gender equality and GBV through sensitization and training.
Reach out to organizations to address underlying causes that affect livelihoods sector-wide capacity to prevent and mitigate GBV, such as gender imbalance in staffing.

Strengthen safety and security for those at risk of GBV through the implementation of infrastructure improvements and the development of GBV-related policies.

Ensure adequate monitoring and evaluation of GBV-related programming (adapted from USAID, 2006).

ESSENTIAL TO KNOW

Conducting Trainings

Throughout this TAG, it is recommended that livelihoods actors **work with GBV specialists to prepare and provide trainings on gender, GBV and women’s/human rights**. These trainings should be provided for a variety of stakeholders, including livelihoods actors, government actors, and community members. Such trainings are essential not only for implementing effective GBV-related programming, but also for engaging with and influencing cultural norms that contribute to the perpetuation of GBV. Where GBV specialists are not available in-country, livelihoods actors can liaise with the Global GBV Area of Responsibility (gbvaor.net) for support in preparing and providing trainings. Livelihoods actors should also:

- Research relevant livelihoods training tools that have already been developed, prioritizing tools that have been developed in-country (e.g. local referral mechanisms, standard operating procedures, tip sheets, etc.).
- Consider the communication and literacy abilities of the target populations, and tailor the trainings accordingly.
- Ensure all trainings are conducted in local language(s) and that training tools are similarly translated.
- Ensure that non-national training facilitators work with national co-facilitators wherever possible.
- Balance awareness of cultural and religious sensitivities with maximizing protections for women, girls and other at-risk groups.
- Seek ways to provide ongoing monitoring and mentoring/technical support (in addition to training), to ensure sustainable knowledge transfer and improved expertise in GBV.
- Identify international and local experts in issues affecting different at-risk groups (e.g. persons with disabilities, LGBTI populations) to incorporate information on specific at-risk groups into trainings.

(For a general list of GBV-specific training tools as well as training tools on related issues, including LGBTI rights and needs, see **Annex 1** of the comprehensive Guidelines, available at <www.gbvguidelines.org>.)

PART THREE
LIVELIHOODS GUIDANCE
LIVELIHOODS

THIS SECTION APPLIES TO:
- Livelihoods coordination mechanisms
- Livelihoods actors (staff and leadership): NGOs, community-based organizations (including National Red Cross/Red Crescent Societies), INGOs and United Nations agencies
- Local committees and community-based groups (e.g. groups for women, adolescents/youth, older persons, etc.) related to livelihoods
- Other livelihoods stakeholders, including national and local governments, community leaders and civil society groups

Why Addressing Gender-Based Violence Is a Critical Concern of Livelihoods Programmes

In the face of severe economic hardship that humanitarian emergencies and associated displacement often cause, many affected populations have limited opportunities to support themselves and their families. Refugees living in camps, for example, are often not legally allowed to work outside of the camps—and some not even within the camps. Refugees living in urban contexts may also be prohibited from working. Displaced men are at times forced into unemployment due to prevalent assumptions that they may engage in harmful activities if they are free to move and seek work.

ESSENTIAL TO KNOW
Defining ‘Livelihoods’
The term ‘livelihoods’ refers to the capabilities, assets and strategies that people use to make a living. Livelihoods programming encompasses a variety of activities, including:
- asset restoration (livestock, tools, equipment)
- income-generating activities (IGAs)
- training and placement programmes
- building in-camp economies
- agrarian interventions
- market interventions
- microfinance
- enterprise development
- Village Savings and Loans Associations (VSLAs)
- cash programming (such as food for work; unconditional/conditional cash grants; cash for work [CFW]; vouchers; etc.)

Finding work can be difficult for both males and females in humanitarian settings; however, women, adolescent girls and other at-risk groups often face particular obstacles related to gender or cultural norms. These norms may inhibit women from working outside the home, or relegate them to work that offers lower income than traditionally male jobs. Laws and practices prohibiting females from owning or accessing land and property can further limit their ability to generate income. Stigma and discrimination may exclude LGBTI persons, ethnic minorities, persons with disabilities and other marginalized groups from economic opportunities. Single heads of households may be unable to work outside of the home if they do not have childcare.

Lack of safe and lucrative livelihoods opportunities not only increases economic dependence on others, but can also elevate vulnerability to violence. For example:

- Economic vulnerability can increase the risk of exposure to sexual exploitation by aid workers, family and community members. In order to support themselves and their families, women, girls and other at-risk groups may enter exploitative work environments, become dependent on and trapped in abusive relationships, or be forced or coerced into prostitution.
- In the absence of formal jobs, many women, adolescent girls and other at-risk groups will find work in the informal economy (e.g. collecting and selling firewood or charcoal; running small-goods kiosks; selling goods door-to-door; or engaging in domestic work with receptor or host communities). These activities may force them to travel through unsafe areas or during dangerous times of day or night.
- Women, girls and other at-risk groups are particularly susceptible to exploitation, harassment and abuse from customers, suppliers and market administrators, especially in unregulated markets and when they must borrow money, negotiate prices or manage a shop alone.

At the same time, introducing livelihoods programmes into humanitarian contexts without taking gender and cultural norms into account can create backlash and inadvertently heighten the risk of violence against participants, particularly females. For example, domestic violence can increase if partners or family members feel threatened by or resentful of women’s economic independence—especially in humanitarian settings where male family members may not be able to meet their traditional responsibilities as ‘breadwinners’. In IDP/refugee settings, livelihoods initiatives that exclusively target displaced populations can increase tension with receptor/host communities, which may perceive displaced persons as taking away economic opportunities or receiving extra benefits. In addition, if new resources are not distributed or managed in safe ways, they can make recipients the target of violence and theft.

If effectively designed, however, livelihoods programmes can mitigate these risks. Programmes that include built-in protective mechanisms to monitor and address potential risk factors can help to reduce participants’ exposure to violence and exploitation, while empowering them with skills training and social and financial capital. Such programmes can:

- Provide women, girls and other at-risk groups with safe alternatives for generating income.
- Enhance their knowledge and skills base of micro-enterprise, financial management, natural resource management and leadership.

For the purposes of this TAG, at-risk groups include those whose particular vulnerabilities may increase their exposure to GBV and other forms of violence: adolescent girls; elderly women; women and children heads of households; girls and women who bear children born of rape and their children born of rape; indigenous people and ethnic and religious minorities; lesbian, gay, bisexual, transgender and intersex (LGBTI) persons; persons living with HIV; persons involved with disabilities; persons involved in forced and/or coerced prostitution and child victims of sexual exploitation; persons in detention; separated or unaccompanied children and orphans, including children associated with armed forces/groups; and survivors of violence. For a summary of the protection rights and needs of each of these groups, see page 10 of this TAG.
### Essential Actions for Reducing Risk, Promoting Resilience and Aiding Recovery throughout the Programme Cycle

#### IMPLEMENTATION

**Programming**

- In consultation with women, girls, men and boys, implement livelihoods programmes that are accessible to those at risk of GBV (e.g. address logistical and cultural obstacles that prevent their participation)
- In consultation with women, girls, men and boys, implement livelihoods programmes that minimize related GBV risks (e.g. sensitive community members about GBV; work with local authorities to increase security measures; engage men and boys as supportive partners through workshops and discussions on gender issues; work with receptor or host communities to reduce competition over employment or natural resources; etc.)
- Promote the economic and professional empowerment of participants through business development, agricultural trainings, value chain integration, vocational skills training, capacity-building and education
- Implement strategies that allow participants to control their assets in ways that mitigate the risk of theft or financial exploitation
- Implement all livelihoods programmes within the framework of building sustainable livelihoods that are ongoing beyond the crisis stage (e.g. develop culturally sensitive exit strategies to lessen the risks of GBV; link short-term livelihoods programmes with longer-term economic empowerment strategies; etc.)

**Policies**

- Incorporate GBV prevention and mitigation strategies into the policies, standards and guidelines of livelihoods programmes (e.g. standards for equal employment of females; procedures and policies for sharing protected or confidential information about GBV incidents; agency procedures to report, investigate and take disciplinary action in cases of sexual exploitation and abuse; etc.)
- Support the reform of national and local laws, policies and plans that hinder women, girls and other at-risk groups from economic and professional empowerment, and allocate funding for sustainability

**Communications and Information Sharing**

- Consult with GBV specialists to identify safe, confidential and appropriate systems of care (i.e. referral pathways) for survivors, and ensure livelihoods staff have the basic skills to provide them with information on where they can obtain support
- Ensure that livelihoods programmes sharing information about reports of GBV within the livelihoods sector or with partners in the larger humanitarian community abide by safety and ethical standards (e.g. shared information does not reveal the identity of or pose a security risk to individual survivors, their families or the broader community)
- Incorporate GBV messages (including prevention, where to report risk and how to access care) into livelihoods-related community outreach and awareness-raising activities, using multiple formats to ensure accessibility

**COORDINATION**

- Undertake coordination with other sectors to address GBV risks, ensure protection and identify livelihood opportunities for women, girls and other at-risk groups
- Seek out the GBV coordination mechanism for support and guidance and, whenever possible, assign a livelihoods focal point to regularly participate in GBV coordination meetings

**MONITORING AND EVALUATION**

- Identify, collect and analyse a core set of indicators—disaggregated by sex, age, disability and other relevant vulnerability factors—to monitor GBV risk-reduction activities throughout the programme cycle
- Evaluate GBV risk-reduction activities by measuring programme outcomes (including potential adverse effects) and using the data to inform decision-making and ensure accountability

---

**NOTE:** The essential actions above are organized in chronological order according to an ideal model for programming. The actions that are in bold are the suggested minimum commitments for livelihoods actors in the early stages of an emergency. These minimum commitments will not necessarily be undertaken according to an ideal model for programming; for this reason, they do not always fall first under each subcategory of the summary table. When it is not possible to implement all actions—particularly in the early stages of an emergency—the minimum commitments should be prioritized and the other actions implemented at a later date. For more information about minimum commitments, see Part Two: Background to Livelihoods Guidance.
Finding work can be difficult for both males and females in humanitarian settings; however, women, adolescent girls and other at-risk groups often face particular obstacles related to gender or cultural norms. These norms may inhibit women from working outside the home, or relegate them to work that offers lower income than traditionally male jobs. Laws and practices prohibiting females from owning or accessing land and property can further limit their ability to generate income. Stigma and discrimination may exclude LGBTI persons, ethnic minorities, persons with disabilities and other marginalized groups from economic opportunities. Single heads of households may be unable to work outside of the home if they do not have childcare.

Lack of safe and lucrative livelihoods opportunities not only increases economic dependence on others, but can also elevate vulnerability to violence. For example:

- Economic vulnerability can increase the risk of exposure to sexual exploitation by aid workers, family and community members. In order to support themselves and their families, women, girls and other at-risk groups may enter exploitative work environments, become dependent on and trapped in abusive relationships, or be forced or coerced into prostitution.
- In the absence of formal jobs, many women, adolescent girls and other at-risk groups will find work in the informal economy (e.g. collecting and selling firewood or charcoal; running small-goods kiosks; selling goods door-to-door; or engaging in domestic work with receptor or host communities). These activities may force them to travel through unsafe areas or during dangerous times of day or night.
- Women, girls and other at-risk groups are particularly susceptible to exploitation, harassment and abuse from customers, suppliers and market administrators, especially in unregulated markets and when they must borrow money, negotiate prices or manage a shop alone.

At the same time, introducing livelihoods programmes into humanitarian contexts without taking gender and cultural norms into account can create backlash and inadvertently heighten the risk of violence against participants, particularly females. For example, domestic violence can increase if partners or family members feel threatened by or resentful of women’s economic independence—especially in humanitarian settings where male family members may not be able to meet their traditional responsibilities as ‘breadwinners’. In IDP/refugee settings, livelihoods initiatives that exclusively target displaced populations can increase tension with receptor/host communities, which may perceive displaced persons as taking away economic opportunities or receiving extra benefits. In addition, if new resources are not distributed or managed in safe ways, they can make recipients the target of violence and theft.

If effectively designed, however, livelihoods programmes can mitigate these risks. Programmes that include built-in protective mechanisms to monitor and address potential risk factors can help to reduce participants’ exposure to violence and exploitation, while empowering them with skills training and social and financial capital. Such programmes can:

- Provide women, girls and other at-risk groups with safe alternatives for generating income.
- Enhance their knowledge and skills base of micro-enterprise, financial management, natural resource management and leadership.

For the purposes of this TAG, at-risk groups include those whose particular vulnerabilities may increase their exposure to GBV and other forms of violence: adolescent girls; elderly women; women and child heads of households; girls and women who bear children born of rape; indigenous people and ethnic and religious minorities; lesbian, gay, bisexual, transgender and intersex (LGBTI) persons; persons living with HIV; persons involved with disabilities; persons involved in forced and/or coerced prostitution and child victims of sexual exploitation; persons in detention; separated or unaccompanied children and orphans, including children associated with armed forces/groups; and survivors of violence. For a summary of the protection rights and needs of each of these groups, see page 10 of this TAG.

Why Addressing Gender-Based Violence Is a Critical Concern of Livelihoods Programmes

In the face of severe economic hardship that humanitarian emergencies and associated displacement often cause, many affected populations have limited opportunities to support themselves and their families. Refugees living in camps, for example, are often not legally allowed to work outside of the camps—and some not even within the camps. Refugees living in urban contexts may also be prohibited from working. Displaced men are at times forced into unemployment due to prevalent assumptions that they may engage in harmful activities if they are free to move and seek work.

Defining ‘Livelihoods’

The term ‘livelihoods’ refers to the capabilities, assets and strategies that people use to make a living. Livelihoods programming encompasses a variety of activities, including:

- asset restoration (livestock, tools, equipment)
- income-generating activities (IGAs)
- training and placement programmes
- building in-camp economies
- agrarian interventions
- market interventions
- microfinance
- enterprise development
- Village Savings and Loans Associations (VSLAs)
- cash programming (such as food for work; unconditional/conditional cash grants; cash for work [CFW]; vouchers; etc.)

Livelihoods coordination mechanisms: NGOs, community-based organizations (including National Red Cross/Red Crescent Societies), INGOs and United Nations agencies

Lack of safe and lucrative livelihoods opportunities not only increases economic dependence on others, but can also elevate vulnerability to violence. For example:

- Economic vulnerability can increase the risk of exposure to sexual exploitation by aid workers, family and community members. In order to support themselves and their families, women, girls and other at-risk groups may enter exploitative work environments, become dependent on and trapped in abusive relationships, or be forced or coerced into prostitution.
- In the absence of formal jobs, many women, adolescent girls and other at-risk groups will find work in the informal economy (e.g. collecting and selling firewood or charcoal; running small-goods kiosks; selling goods door-to-door; or engaging in domestic work with receptor or host communities). These activities may force them to travel through unsafe areas or during dangerous times of day or night.
- Women, girls and other at-risk groups are particularly susceptible to exploitation, harassment and abuse from customers, suppliers and market administrators, especially in unregulated markets and when they must borrow money, negotiate prices or manage a shop alone.

At the same time, introducing livelihoods programmes into humanitarian contexts without taking gender and cultural norms into account can create backlash and inadvertently heighten the risk of violence against participants, particularly females. For example, domestic violence can increase if partners or family members feel threatened by or resentful of women’s economic independence—especially in humanitarian settings where male family members may not be able to meet their traditional responsibilities as ‘breadwinners’. In IDP/refugee settings, livelihoods initiatives that exclusively target displaced populations can increase tension with receptor/host communities, which may perceive displaced persons as taking away economic opportunities or receiving extra benefits. In addition, if new resources are not distributed or managed in safe ways, they can make recipients the target of violence and theft.

If effectively designed, however, livelihoods programmes can mitigate these risks. Programmes that include built-in protective mechanisms to monitor and address potential risk factors can help to reduce participants’ exposure to violence and exploitation, while empowering them with skills training and social and financial capital. Such programmes can:

- Provide women, girls and other at-risk groups with safe alternatives for generating income.
- Enhance their knowledge and skills base of micro-enterprise, financial management, natural resource management and leadership.

For the purposes of this TAG, at-risk groups include those whose particular vulnerabilities may increase their exposure to GBV and other forms of violence: adolescent girls; elderly women; women and child heads of households; girls and women who bear children born of rape and their children born of rape; indigenous people and ethnic and religious minorities; lesbian, gay, bisexual, transgender and intersex (LGBTI) persons; persons living with HIV; persons involved with disabilities; persons involved in forced and/or coerced prostitution and child victims of sexual exploitation; persons in detention; separated or unaccompanied children and orphans, including children associated with armed forces/groups; and survivors of violence. For a summary of the protection rights and needs of each of these groups, see page 10 of this TAG.
Empower and foster their independence, which may increase their ability to leave exploitative situations.

Enhance economic, physical and psychological well-being of individuals, families and communities.

Create and raise awareness about issues of GBV, gender norms and power imbalances in the family and community in a sensitive way.

Improve the management of natural resources and thereby support more sustainable or alternative livelihoods.

Actions taken by the livelihoods sector to prevent and mitigate the risks of GBV should be done in coordination with GBV specialists and actors working in other humanitarian sectors. Livelihoods actors should also coordinate with—where they exist—partners addressing gender, mental health and psychosocial support (MHPSS), HIV, age and environment. (See ‘Coordination’, below.)

Addressing Gender-Based Violence throughout the Programme Cycle

KEY ASSESSMENT TARGET GROUPS

- Key stakeholders in livelihoods: governments; civil societies; local leaders; market sellers and firms; business groups; community members; humanitarian workers; GBV, gender and diversity specialists
- Affected populations and communities
- In IDP/refugee settings, members of receptor/host communities

KEY ASSESSMENT TARGET GROUPS

The questions listed below are recommendations for possible areas of inquiry that can be selectively incorporated into various assessments and routine monitoring undertaken by livelihoods actors. Wherever possible, assessments should be inter-sectoral and interdisciplinary, with livelihoods actors working in partnership with other sectors as well as with GBV specialists.

The areas of inquiry below should be used to complement existing guidance materials, such as the assessment checklists found in the Livestock Emergency Guidelines and Standards (<www.livestock-emergency.net>). These areas of inquiry are linked to the three main types of responsibilities detailed below under ‘Implementation’: programming, policies, and communications and information sharing. The information generated from these areas of inquiry should be analysed to inform planning of livelihoods programmes in ways that prevent and mitigate the risk of GBV. This information may highlight priorities and gaps that need to be addressed when planning new programmes or adjusting existing programmes. For general information on programme planning and on safe and ethical assessment, data management and data sharing, see Part Two: Background to Livelihoods Guidance.
**POSSIBLE AREAS OF INQUIRY** (Note: This list is not exhaustive)

### Areas Related to Livelihoods PROGRAMMING

**Participation and Leadership**

a) Are women and other at-risk groups actively involved in all aspects of livelihoods programming design, implementation and monitoring?

b) What is the ratio of male to female livelihood staff, including in positions of leadership?
   - Are systems in place for training and retaining female staff?
   - Are there any cultural or security issues related to their employment that may increase their risk of GBV?

c) Are the lead actors in livelihoods programming aware of international standards (including this TAG as well as the comprehensive Guidelines) for mainstreaming GBV prevention and mitigation strategies into their activities?

**Cultural and Community Norms and Practices**

d) How has the crisis impacted communities’ economic coping strategies, livestock management strategies and access to safe livelihoods activities—particularly for females and other at-risk groups?
   - What are the harmful psychological, physical and social impacts of changes in livelihoods activities?

e) What cultural barriers do women, adolescent girls and other at-risk groups face in accessing markets, livelihoods activities, livestock management strategies and financial services (e.g. gender norms that exclude females from certain types of work; discrimination against women in the workplace or marketplace; etc.)?

f) What physical, logistical, legal or educational issues prevent women, adolescent girls and other at-risk groups from accessing livelihood opportunities and/or sustain gendered divisions in income-generating activities (e.g. mobility or transportation issues; childcare and other domestic responsibilities; disabilities; legal barriers preventing refugees from accessing jobs in the formal sector; legal barriers to ownership of property, land or other productive assets; illiteracy; lack of training; etc.)?

g) Are there unequal gender norms that livelihoods programmes risk perpetuating (e.g. by placing women only in caretaking and childcare jobs; by placing men only in traditionally male jobs such as guarding and mechanical maintenance; by delivering skills training programmes that reinforce stereotypes; etc.)?
   - Do livelihoods activities shift additional burdens to women, adolescent girls and other at-risk groups participating in the activities?

h) Have market surveys identified livelihood activities that are profitable and empowering, particularly for women, adolescent girls and other at-risk groups?

i) What are the preferences and cultural habits to consider before determining the type of livelihoods activities, locations, services and goods?
   - What livelihoods practices were people engaged in before the emergency?
   - What were the roles of women, girls, men and boys with regard to livestock ownership, control, care and management?
   - What kinds of activities are forbidden to women or men by local customs?
   - What is the balance of power between women and men in accessing and controlling productive assets?
   - What are the risks of backlash associated with women, adolescent girls and other at-risk groups engaging in economic programmes—particularly by intimate partners and/or family members?

**Physical Safety and Risks of GBV**

j) What are the GBV-related risks faced by affected populations—particularly women, adolescent girls and other at-risk groups—when earning a living?
   - Which logistical and environmental issues increase the risk of sexual assault, harassment or exploitation (e.g. borrowing money; getting stopped by police; selling goods from house to house; travelling at night; travelling through unsafe areas; working in a shop by oneself; etc.)?
   - Which livelihoods relationships increase the risk of sexual assault, harassment or exploitation, and which provide safety (e.g. customers, suppliers, market administrators, intimate partners, etc.)? Who is orchestrating, encouraging, permitting and colluding in the perpetration of violence?

k) Does limited access to livelihoods assets force women and other at-risk groups to adopt unsafe survival strategies? If so, what are they? What might help mitigate their risk of engaging in these survival strategies?

(continued)
### Areas Related to Livelihoods POLICIES

**a)** Are GBV prevention and mitigation strategies incorporated into the policies, standards and guidelines of livelihoods programmes?
- Are women, girls and other at-risk groups meaningfully engaged in the development of livelihoods policies, standards and guidelines that address their rights and needs, particularly as they relate to GBV? In what ways are they engaged?
- Are these policies, standards and guidelines communicated to women, girls, boys and men (separately when necessary)?
- Are livelihoods staff properly trained and equipped with the necessary skills to implement these policies?

**b)** What is the legal status of females related to legal employment, property ownership, inheritance, access to land and natural resources, and access to education? Do females have any legal protections against economic exploitation in marriage?

**c)** What does the legislation say about refugees’ entitlement to work? What are the formal/informal practices regarding refugees and livelihoods?

**d)** What is the legal age of employment, and what are the laws around child labor?

**e)** Are there national action plans for poverty reduction? Are there youth and/or gender strategies/action plans?
- Do these plans support the economic empowerment of women, adolescent girls and other at-risk groups?
- Are livelihoods programmes set up in alignment with these plans?

### Areas Related to Livelihoods COMMUNICATIONS and INFORMATION SHARING

**a)** Has training been provided to livelihoods staff on:
- Issues of gender, GBV, women’s/human rights, social exclusion and sexuality?
- How to supportively engage with survivors and provide information in an ethical, safe and confidential manner about their rights and options to report risk and access care?

**b)** Do livelihoods programmes raise awareness within the community about GBV risks and protective factors related to livelihoods activities?
- Does this awareness-raising include information on survivor rights (including confidentiality at the service delivery and community levels), where to report risk and how to access care for GBV?
- Is this information provided in age-, gender-, and culturally appropriate ways?
- Are males, particularly leaders in the community, engaged in these awareness-raising activities as agents of change?

**c)** Are discussion forums on livelihoods age-, gender-, and culturally sensitive? Are they accessible to women, girls and other at-risk groups (e.g. confidential, with females as facilitators of women’s and girls’ discussion groups, etc.) so that participants feel safe to raise GBV issues?
KEY GBV CONSIDERATIONS FOR RESOURCE MOBILIZATION

The information below highlights important considerations for mobilizing GBV-related resources when drafting proposals for livelihoods programming. Whether requesting pre-/emergency funding or accessing post-emergency and recovery/development funding, proposals will be strengthened when they reflect knowledge of the particular risks of GBV and propose strategies for addressing those risks.

ESSENTIAL TO KNOW

Beyond Accessing Funds

‘Resource mobilization’ refers not only to accessing funding, but also to scaling up human resources, supplies and donor commitment. For more general considerations about resource mobilization, see Part Two: Background to Livelihoods Guidance. Some additional strategies for resource mobilization through collaboration with other humanitarian sectors/partners are listed under ‘Coordination’, below.

A. HUMANITARIAN NEEDS OVERVIEW

- Does the proposal articulate the GBV-related safety risks, protection needs and rights of those engaging in livelihoods activities?
- Are risks for specific forms of GBV (e.g. sexual assault, harassment, intimate partner violence and other forms of domestic violence, etc.) described and analysed, rather than a broader reference to ‘GBV’?

B. PROJECT RATIONALE/JUSTIFICATION

- When drafting a proposal for emergency response:
  - Is there a clear description of how the livelihoods programme will reduce the risks of GBV for participants (e.g. the location and design of programmes; strategies for mitigating backlash within the community; etc.)?
  - Is there a strategy for preparing and providing trainings for government, humanitarian workers, women’s groups and community members engaged in livelihoods work on the design and implementation of livelihoods programming that mitigates the risk of GBV?
  - Are additional costs required to ensure any GBV-related community outreach materials are available in multiple formats and languages (e.g. Braille; sign language; simplified messaging such as pictograms and pictures; etc.)?

- When drafting a proposal for post-emergency and recovery:
  - Is there an explanation of how the livelihoods programme will contribute to sustainable strategies that promote the empowerment, safety and economic well-being of those at risk of GBV, and to long-term efforts to reduce specific types of GBV?
  - Does the programme recognize and support the goal of gender equality?
  - Does the proposal reflect a commitment to working with the community to ensure sustainability?

- Do the proposed activities reflect guiding principles and key approaches (human rights-based, survivor-centred, community-based and systems-based) for integrating GBV-related work?

C. PROJECT DESCRIPTION

- Where applicable and feasible, do the activities provide opportunities for women and adolescent girls to engage in non-gender-stereotyped occupations that may be of higher income and status than traditionally female occupations?
  - Are local leaders and government partners involved as active participants in this process to enhance the sustainability of projects?
  - Are women and adolescent girls consulted as to which occupations would be safe for them, especially if these activities are not traditionally female?
KEY GBV CONSIDERATIONS FOR IMPLEMENTATION

The following are some common GBV-related considerations when implementing livelihoods programming in humanitarian settings. These considerations should be adapted to each context, always taking into account the essential rights, expressed needs and identified resources of the target community.

Integrating GBV Risk Reduction into LIVELIHOODS PROGRAMMING

1. Involve women and other at-risk groups within the affected population as staff and leaders in livelihoods programming (with due caution in situations where this poses a potential security risk or increases the risk of GBV).

   ▶ Strive for 50 per cent representation of females within livelihoods programme staff. Provide them with targeted support to assume leadership and training positions. Be aware of potential tensions that may be caused by attempting to change the role of women in communities and, as necessary, engage in dialogue with males to ensure their support.

   ▶ Employ persons from at-risk groups in livelihoods staff, leadership and training positions. Solicit their input to ensure specific issues of vulnerability are adequately represented and addressed in programmes.

2. In consultation with women, girls, men and boys, implement livelihoods programmes that are accessible to those at risk of GBV.

   ▶ Address logistical obstacles that prevent women, adolescent girls and other at-risk groups from participating in planning meetings and livelihoods activities.

      • Ensure locations and times meet the needs of women and adolescent girls who have family-related responsibilities.

      • Ensure physical access for persons with disability.

      • Provide childcare for programme participants.

   ▶ Address cultural obstacles that prevent women, adolescent girls and other at-risk groups from participating in livelihoods programming.

ESSENTIAL TO KNOW

Minimum Working Age

In implementing activities that involve work, agencies should conform to national legislation regarding the minimum working age and should monitor closely to ensure that livelihoods activities do not promote child labour or encourage children and adolescents to miss school. However, even at young ages, girls and boys can be given opportunities to build their leadership, literacy and numeracy skills, as well as their ability to manage money.

Incorporating GBV Survivors into Livelihoods Programmes

GBV survivors should not be the sole participants of a specific livelihoods programme, as this can increase stigma against them and compromise their confidentiality, safety and security. One good approach is to work with communities to identify the most vulnerable generally (e.g. female single heads of household, survivors of GBV, women with households of more than three children, persons with disabilities, LGBTI persons, etc.). Programmes can then target all of these groups and/or individuals in a way that does not segregate or expose survivors.
• Undertake outreach initiatives to address gender and cultural norms that prohibit females and other at-risk groups from certain kinds of work. Ensure these initiatives are age-, gender-, and culturally sensitive.

• Support local organizations, community groups and businesses to provide adolescent girls and other at-risk groups opportunities to connect with each other in a safe space, share resources and skills, and communicate about important livelihoods issues.

3. In consultation with women, girls, men and boys, implement livelihoods programmes that minimize possible GBV-related risks as a result of participation.

► Consult with participants to identify potential safety risks related to livelihoods activities, and support participants in managing and making empowered choices about these risks.

► Whenever possible, situate livelihoods activities in safe locations and schedule them during times of the day/week that minimize the risk of GBV. Ensure participants are not unnecessarily exposed to risky situations (e.g. getting stopped by police; selling goods from house to house; working in a shop by oneself; needing to travel after dark; etc.). Support communities’ proposed solutions for mitigating these risky situations.

► Create linkages for participants with trustworthy vendors, transport companies and end markets to mitigate the risk of exploitation (e.g. by customers, suppliers, market administrators, police or other security personnel, etc.).

PROMISING PRACTICE
The Egyptian Sudanese Development Centre in Arba’ay Nuss runs a domestic service training and placement programme. The director of the programme promotes the protection and fair treatment of refugee women by accompanying graduates to their placement homes, recording the names and contact information of employers, as well as the agreed-upon salary. This small step serves to hold families accountable and illustrates the role the community centre is willing to play on behalf of refugee women.

Work with local authorities, communities and other interested sectors (such as CCCM or WASH) to enhance the safety of participants. Coordinated strategies can include establishing safety patrols along routes to work, escort systems, or police and community surveillance systems; providing solar lanterns as part of core relief efforts; or installing adequate lighting along travel routes.

Conduct ongoing analysis and consultation with both females and males in the community about how the economic empowerment of women, adolescent girls and other at-risk groups may increase tensions within families or communities. Put strategies in place to mitigate backlash and other negative effects for participants.

- Sensitize participants, their families and community members about GBV.
- Engage men and adolescent boys as direct participants in parallel livelihoods programmes and/or as supportive partners in livelihoods programmes for women and adolescent girls.
- In IDP/refugee situations, work with receptor or host communities to reduce tensions over employment scarcity. Ensure that livelihoods programmes do not promote the unsustainable use of natural resources or put groups in direct competition over natural resources. Consider bringing members from both communities together in culturally sensitive ways to build bonds, and monitor that members from both communities are benefiting from livelihoods activities.
- Promote understanding between different livelihoods groups (e.g. pastoralists and farmers) through group meetings, discussions and other community formats to reduce potential conflict and encourage mutual support.

LESSON LEARNED

In camps in the Somali region of Ethiopia, the Danish Refugee Council (DRC) provided micro-grants to entrepreneurs. The programme originally targeted only female-headed households who, as a result of participation, experienced hostility, such as increased verbal abuse from men in the community. DRC responded by engaging men as participants and consulting community leaders to get buy-in for the programme.

4. Promote the economic and professional empowerment of participants through business development, agricultural trainings, value chain integration, vocational skills training, capacity-building and education.

- Consult with affected populations and use professional market surveys to identify entry points for profitable work. Consider diversifying income streams to promote adequate income and minimize the likelihood that affected populations, particularly women and adolescent girls, will resort to commercial sex work or other risky income alternatives.

- Take a graduated approach to economic strengthening. First, ensure that immediate needs are met through consumption support; then, connect affected populations with sustainable livelihoods strategies and/or financial services.

- As appropriate, promote non-traditional employment opportunities that can: contribute to the status and professional empowerment of women and adolescent girls; assist men to (re)enter the workforce; and create opportunities for LGBTI persons who may otherwise be excluded from traditionally male and female employment opportunities. Build upon indigenous knowledge about livelihoods practices that have been profitable and empowering, especially for women and adolescent girls.

- Provide trainings on marketable, profitable and transferable skills such as financial literacy, business management, computer skills and marketing.
  - Take into account the time and location of trainings, the sex of facilitators and access issues such as childcare.
  - Link trainings with work apprenticeships and/or job placement services that have been appropriately screened and monitored for safety.
  - Consider implementing non-formal education programming on topics such as literacy and numeracy for those who have not completed their schooling.

5. Implement strategies that allow participants to control their assets in ways that mitigate the risk of theft or financial exploitation.

- Consider transferring grants, earnings or loans directly to bank or mobile money accounts rather than distributing cash.

- When disbursing directly to participants, ensure safe location and timing of grant, earning and loan distribution.

- Support the development of associations, cooperatives and other groups as appropriate to ensure that affected populations can minimize their commercial exploitation.

- Regularly consult with loan recipients to ensure their loan is not increasing their poverty level. Ensure they are not compounding their debt by accepting multiple loans from different service providers.

**PROMISING PRACTICE**

In the 2004 South India tsunami response, non-traditional skills training by some NGOs (such as training in masonry, repairing handpumps and running a courier business) have challenged the norms of gender division in labour and service markets. In addition, they have raised participants’ esteem in the eyes of their husbands, children and the community at large.

6. Implement all livelihoods programmes within the framework of building sustainable livelihoods that are ongoing beyond the crisis stage.

- For short-term livelihoods programmes, assess the consequences and possible negative impacts of exiting—for example if participants will be put at economic or survival risk when the programme ends. Develop a culturally sensitive exit strategy to ameliorate these risks (such as linking participants with job placement or loan programmes). When possible, link short-term livelihoods programmes with longer-term poverty reduction and economic empowerment strategies that are market-driven (i.e. profitable).

- Where applicable, take seasonality into account when designing programmes (e.g. provide more targeted livelihoods support towards the end of a dry season to mitigate the risks of shortage).

- Where available and appropriate, assist in coordinating insurance plans or risk transfer mechanisms to provide financial support and/or ameliorate business losses due to cyclical natural disasters.

Integrating GBV Risk Reduction into LIVELIHOODS POLICIES

1. Incorporate relevant GBV prevention and mitigation strategies into the policies, standards and guidelines of livelihoods programmes.

- Identify and ensure the implementation of programmatic policies that (1) mitigate the risks of GBV and (2) support the participation of women, adolescent girls and other at-risk groups as staff and leaders in livelihoods programmes. These can include, among others:
  - Policies regarding childcare for livelihoods staff.
  - Standards for equal employment of females.
  - Procedures and protocols for sharing protected or confidential information about GBV incidents.
  - Relevant information about agency procedures to report, investigate and take disciplinary action in cases of sexual exploitation and abuse.

- Circulate these widely among livelihoods staff, committees and management groups and—where appropriate—in national and local languages to the wider community (using accessible methods such as Braille; sign language; posters with visual content for non-literate persons; announcements at community meetings; etc.).

2. Support the reform of national and local laws, policies and plans that hinder women, girls and other at-risk groups from economic and professional empowerment and allocate funding for sustainability.

- Work with government authorities, NGOs, INGOs and other stakeholders to develop and implement national action plans (e.g. poverty reduction strategies) that:
  - Support the promotion and inclusion of economic empowerment opportunities for women, girls and other at-risk groups.
  - Integrate GBV risk-reduction strategies into poverty reduction strategies.

- In collaboration with affected populations, advocate for the rights of women, adolescent girls and other at-risk groups to legal employment (e.g. refugees’ entitlement to work); property ownership; inheritance; protections in marriage; access to land and natural resources; and access to education and training.
Support relevant line ministries in developing implementation strategies for GBV-related policies and plans. Undertake awareness-raising campaigns highlighting how such policies and plans will benefit communities in order to encourage community support and mitigate backlash.

Integrating GBV Risk Reduction into LIVELIHOODS COMMUNICATIONS AND INFORMATION SHARING

1. Consult with GBV specialists to identify safe, confidential and appropriate systems of care (i.e. referral pathways) for survivors, and ensure livelihoods staff have the basic skills to provide them with information on where they can obtain support.
   ▶ Ensure all livelihoods personnel who engage with affected populations have written information about where to refer survivors for care and support. Regularly update information about survivor services.
   ▶ Train all livelihoods personnel who engage with affected populations in gender, GBV, women’s/human rights, social exclusion, sexuality and psychological first aid (e.g how to supportively engage with survivors and provide information in an ethical, safe and confidential manner about their rights and options to report risk and access care).

2. Ensure that livelihoods programmes sharing information about reports of GBV within the livelihoods sector or with partners in the larger humanitarian community abide by safety and ethical standards.
   ▶ Develop inter- and intra-agency information-sharing standards that do not reveal the identity of or pose a security risk to individual survivors, their families or the broader community.

3. Incorporate GBV messages into livelihoods-related community outreach and awareness-raising activities.
   ▶ Work with GBV specialists to integrate community awareness-raising on GBV into livelihoods outreach initiatives (e.g. community dialogues, workshops, GBV messaging, etc.).
     • Ensure this awareness-raising includes information on prevention, survivor rights (including to confidentiality at the service delivery and community levels), where to report risk and how to access care for GBV.
     • Use multiple formats and languages to ensure accessibility (e.g. Braille; sign language; simplified messaging such as pictograms and pictures; etc.).
     • Engage women, girls, men and boys (separately when necessary) in the development of messages and in strategies for their dissemination so they are age-, gender-, and culturally appropriate.

ESSENTIAL TO KNOW

Referral Pathways
A ‘referral pathway’ is a flexible mechanism that safely links survivors to supportive and competent services, such as medical care, mental health and psychosocial support, police assistance and legal/justice support.

GBV-Specific Messaging
Community outreach initiatives should include dialogue about basic safety concerns and safety measures for the affected population, including those related to GBV. When undertaking GBV-specific messaging, non-GBV specialists should be sure to work in collaboration with GBV-specialist staff or a GBV-specialized agency.
Engage males, particularly leaders in the community, as agents of change in building a supportive environment for women’s and adolescent girls’ livelihoods programmes (e.g. through workshops, trainings, meetings with community leaders, discussions on gender and rights issues, etc.).

Consider the barriers faced by women, adolescent girls and other at-risk groups to their safe participation in community discussion forums (e.g. transportation, risk of backlash, childcare, etc.). Implement strategies to make discussion forums age-, gender-, and culturally sensitive (e.g. confidential, with females as facilitators of women’s and girls’ discussion groups, etc.) so that participants feel safe to raise GBV issues.

Provide community members with information about existing codes of conduct for livelihoods personnel, as well as where to report sexual exploitation and abuse committed by livelihoods personnel. Ensure appropriate training is provided for staff and partners on the prevention of sexual exploitation and abuse.

---

**PROMISING PRACTICE**

The Women’s Protection and Empowerment (WPE) programme of the International Rescue Committee (IRC) works to empower women socially and economically through the EA$E (Economic and Social Empowerment) Programme. The EA$E Programme seeks to promote safer gender dynamics in the household by increasing women’s decision-making in the home. It does this through three components of empowerment:

1) **Access to financial services through Village Savings and Loan Associations (VSLAs).** Using the VSLA model, groups of 15–30 women come together to save money collectively and contribute to a common fund. This common fund is then used to give small loans to individual members, which they pay back at a modest interest rate. Over time VSLAs contribute to women’s income and create a space of social and economic support.

2) **Gender dialogues—Talking about Talking Discussion Series.** Preliminary research has shown that adding space for gender dialogues—in addition to economic programmes for women—can be helpful in reducing intimate partner violence and other forms of domestic violence. The EA$E Programme facilitates an ongoing discussion series for VSLA members and their spouses. These dialogues focus on household finances and economic decision-making, while also incorporating deeper issues of power imbalance, women’s value in the home and alternatives to violence. These dialogues address underlying attitudes about violence against women, decision-making and relationship dynamics that economic programmes on their own do not address. At the same time, participants are able to address these topics in a non-threatening way by making the improvement of household well-being—rather than intimate partner violence—the main focus of these discussions.

3) **Business training.** VSLA members are trained in practical business skills that help them use loans effectively, explore profitable business opportunities and expand small-scale business activities.

The EA$E programme is operating in nine countries throughout Africa and conducts ongoing rigorous impact evaluations. Initial measures in the pilot programme in Burundi showed that integrating the discussion series along with economic empowerment led to a decrease in intimate partner violence levels and acceptance of violence; it also led to an increase in women’s involvement in decision-making and use of negotiation skills between spouses.

(For more information, see: International Rescue Committee, <www.rescue.org/sites/default/files/resource-file/Burundi%20EASE%20Impact%20Eval%20Formatted%20Final.pdf>.)
KEY GBV CONSIDERATIONS FOR COORDINATION WITH OTHER HUMANITARIAN SECTORS

As a first step in coordination, livelihoods programmers should seek out the GBV coordination mechanism to identify where GBV expertise is available in-country. GBV specialists can be enlisted to assist livelihoods actors to:

- Design and conduct livelihoods assessments that examine the risk of GBV related to livelihoods programming, and strategize with livelihoods actors about ways for such risks to be mitigated.
- Provide trainings for livelihoods staff on issues of gender, GBV and women’s rights/human rights.
- Identify where survivors who may report instances of GBV exposure to livelihoods staff can receive safe, confidential and appropriate care, and provide livelihoods staff with the basic skills and information necessary to respond supportively to survivors.
- Conduct training and awareness-raising for the affected community on issues of gender, GBV and women’s/human rights as they relate to livelihoods.

In addition, livelihoods programmers should link with other humanitarian sectors to further reduce the risk of GBV. Some recommendations for coordination with other sectors are indicated below (to be considered according to the sectors that are mobilized in a given humanitarian response). While not included in the table, livelihoods actors should also coordinate with—where they exist—partners addressing gender, mental health and psychosocial support (MHPSS), HIV, age and environment. For more general information on GBV-related coordination responsibilities, see Part Two: Background to Livelihoods Guidance.
PART 3: GUIDANCE

**Camp Coordination and Camp Management (CCCM)**
- Work with CCCM partners to:
  - Identify safe and unsafe areas within the camp for livelihoods activities
  - Plan—with the support of women and adolescent girls—the location of livelihoods activities based on safety concerns, as well as access to fuel, water and other key natural resources

**Child Protection**
- Engage with child protection actors to:
  - Conduct analysis of child labour in affected areas
  - Ensure child protection standards are incorporated into livelihoods interventions

**Education**
- Work with education actors to:
  - Explore and consider implementing non-formal education programmes that include literacy and financial literacy, livelihoods and vocational training components
  - Locate damaged schools in need of repair and identify opportunities for (re)construction work as part of livelihoods initiatives

**Food Security and Agriculture**
- Work with food security and agriculture actors to:
  - Identify the most pressing agricultural market demands of the community (e.g. farming, growing and selling cash crops, raising livestock, etc.) that can be developed into opportunities for livelihoods programmes
  - Consider opportunities for entrepreneurship as well as non-traditional employment options in agricultural-based work
  - Negotiate access to land for displaced populations in camps and urban areas
  - Assess and support women’s role in agriculture, including through access to markets and to extension workers

**Health**
- Obtain information from health actors about referral pathways for health care following survivor disclosure
- Enlist support of the health sector in monitoring any health risks associated with livelihoods schemes (e.g. hazardous environments such as smoky kitchens)

**Housing, Land and Property (HLP)**
- Work with HLP actors to support and protect the rights of women, adolescent girls and other at-risk groups to property ownership, inheritance and access to land and natural resources

**Nutrition**
- Work with nutrition actors to:
  - Consider livelihoods opportunities that address nutrition shortcomings (e.g. promoting high-nutrition crops)
  - Link livelihoods projects (e.g. agricultural development or group businesses) with nutrition/cooking classes
  - Support working mothers in livelihoods programmes through breastfeeding or nursery programmes

**Protection**
- Collaborate with protection actors to monitor protection issues in and around livelihoods activities
- Link with law enforcement as partners to address safety needs of women, girls and other at-risk groups travelling to/from work as well as safety in the work environment (e.g. from exploitation)

**Shelter, Settlement and Recovery (SS&R)**
- Work with SS&R actors to identify areas for skilled and unskilled labour mentoring in SS&R programmes
- Identify age-, gender-, and culturally appropriate livelihoods opportunities for those at risk of GBV related to the building, design and maintenance of shelters

**Water, Sanitation and Hygiene (WASH)**
- Work with WASH actors to identify age-, gender-, and culturally appropriate livelihoods opportunities for those at risk of GBV (e.g. opportunities related to the building, design, and maintenance of latrines and other WASH facilities in managed camp settings)
KEY GBV CONSIDERATIONS FOR MONITORING AND EVALUATION THROUGHOUT THE PROGRAMME CYCLE

The indicators listed below are non-exhaustive suggestions based on the recommendations contained in this TAG. Indicators can be used to measure the progress and outcomes of activities undertaken across the programme cycle, with the ultimate aim of maintaining effective programmes and improving accountability to affected populations. The ‘Indicator Definition’ describes the information needed to measure the indicator; ‘Possible Data Sources’ suggests existing sources where a livelihoods programme or agency can gather the necessary information; ‘Target’ represents a benchmark for success in implementation; ‘Baseline’ indicators are collected prior to or at the earliest stage of a programme to be used as a reference point for subsequent measurements; ‘Output’ monitors a tangible and immediate product of an activity; and ‘Outcome’ measures a change in progress in social, behavioural or environmental conditions. Targets should be set prior to the start of an activity and adjusted as the project progresses based on the project duration, available resources and contextual concerns to ensure they are appropriate for the setting.

The indicators should be collected and reported by the livelihoods sector. Several indicators have been taken from the livelihoods sector’s own guidance and resources (see footnotes below the table). See Part Two: Background to Livelihoods Guidance for more information on monitoring and evaluation.

To the extent possible, indicators should be disaggregated by sex, age, disability and other vulnerability factors. See Part One: Introduction for more information on vulnerability factors for at-risk groups.
