## HOW-TO: A PRACTITIONER-FRIENDLY GUIDE ON HOW TO INTEGRATE GBV RISK MITIGATION INTO PROGRAM DESIGN & IMPLEMENTATION

ALL sectors must work to mitigate the risks associated with their programs to ensure that women, girls, and other vulnerable groups can safely access and use them.

The following brief is part of a series of sequenced step-by-step briefs on how to integrate GBV risk mitigation across different elements of the Humanitarian Program Cycle (HPC). This brief covers integrating GBV risk mitigation into program design and implementation.

There are **MULTIPLE ENTRY POINTS** for understanding where and how GBV risk mitigation strategies/actions can be implemented in humanitarian action.

- Understanding the risks that different groups within an affected population may be facing allows for the DESIGN OF PROGRAMMING TO BETTER AND MORE SAFELY MEET THEIR NEEDS.
- Successful implementation activities need to be determined by the **CONTEXT**. GBV risk mitigation strategies provide a framework to identify where risk mitigation actions should be implemented based on context.

## WHY INTEGRATE GBV RISK MITIGATION STRATEGIES INTO PROGRAM DESIGN AND IMPLEMENTATION

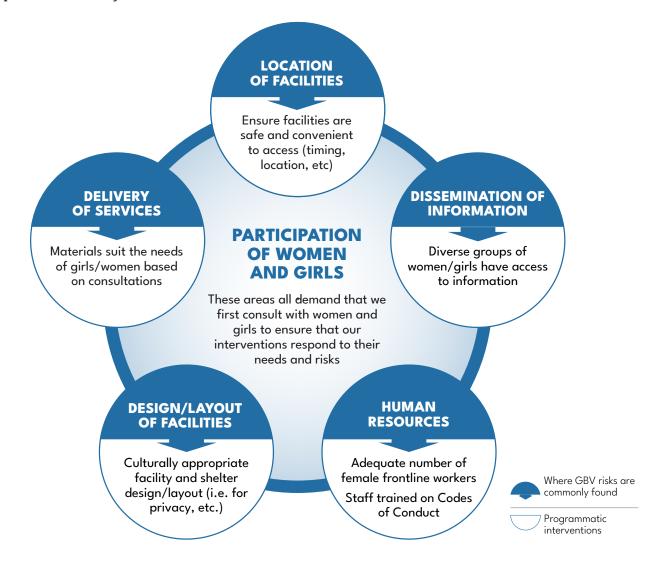

GBV risk mitigation is just good programming. Ensuring that our programs are safe and accessible to all, including and especially the most vulnerable or marginalized within a community, is not "additional" work—rather, ensuring that GBV risk mitigation actions are integrated into every sector's programs should result not only in safer programming overall, but in better sector-specific outcomes.

## **HOW TO INTEGRATE GBV RISK MITIGATION STRATEGIES** INTO PROGRAM DESIGN AND IMPLEMENTATION

GBV risks can occur across all levels of intervention [societal/institutional, community, and individual/service delivery] and therefore there are opportunities at each of these levels to engage in GBV risk mitigation. For examples of strategies that can be incorporated at each level, see below.

## **SOCIETAL/INSTITUTIONAL EXAMPLE** Incorporate GBV risk mitigation strategies into policies, standards and guidelines within our own agencies (for example codes of conduct and **STRATEGIES** partner agreements). For a helpful resource, see the GBV RISK MITIGATION INSTITUTIONALIZATION RESOURCE PACK Incorporate/advocate for GBV risk mitigation strategies in national and local laws and polices COMMUNITY **EXAMPLE** Assess and address barriers to humanitarian aid and services **STRATEGIES** Strengthen existing community-based protective structures and support networks that can play a role in safe and appropriate response to GBV disclosures and provide basic PFA and referrals Increase community awareness about available services INDIVIDUAL/SERVICE DELIVERY **EXAMPLE** ■ Consult women, girls and other vulnerable groups in the decision-making and design of services **STRATEGIES** ■ Ensure female and multi-lingual staff Design program modalitities that take GBV risk into account (see diagram below) Ensure safe location of /routes to and from services

The diagram below indicates areas where GBV risks are commonly found and the general **TYPES** of interventions that can help mitigate those risks. To ensure that interventions are as effective as possible in the context in which they are to be implemented, it is critical to include GBV risk related questions in every sector's **ASSESSMENTS**.

The Thematic Area Guides (TAGs) of the GBV Guidelines include concrete, standard GBV risk mitigation measures that you can use in your sector.

For examples of sector-specific GBV risk mitigation strategies in practice SEE YOUR SECTOR PAGE.
